ADVERTISEMENT.

A Fourth Edition of this Work being called for, the Author has made various alterations and additions to the former Volume, which have been rendered necessary by important decisions in the Courts of Law and Equity, in modern patent cases; and he trusts by so doing that the work will be rendered more useful.

In former Editions of this work, the Author, in citing judgments given in Courts of Law in Patent cases, referred to the numerous Law Books containing reports of the particular cases, but few, if any, patentees, manufacturers, or inventors, could have the opportunity of reading the cases. The Author has for many years had in his possession a manuscript collection of Law Reports of Patent cases, many of which had not been printed, and he has lately published a large proportion of all the Patent cases in the
“Repertory of Patent Inventions,” a work of easy reference to manufacturers and inventors; and in the present volume, the Author, in addition to stating where the cases can be found in the Law Books, has also referred to his own Reports, by which the patentee, the manufacturer, and the inventor, may turn to any case cited, and judge for himself as to the general tenor of the judgment given in a particular case.

The Author takes this opportunity of again congratulating persons interested in Patent Property, on the security now offered by this department of the Law, and to express the opinion that if an inventor take reasonable care, and be well advised, he cannot fail to obtain full security by a Patent.

Lincoln’s Inn,
October, 1846.
PREFACE TO FIRST EDITION.

Amongst the various publications, which at present treat of the Laws relating to Patents for Inventions, it is surprising that no popular work, adapted to the use of inventors and patentees, has made its appearance, particularly when we reflect that they have to suffer from any want of judgment in obtaining grants from the Crown to protect new inventions.

To supply this defect is the object of the present work; and it has been the desire of the Author to explain, in a familiar manner, the nature of Letters Patent, and the laws which relate to this description of property.

The many years the Author has been engaged in the study of mechanical science, and in giving advice to inventors and patentees, as to the best means of securing to themselves a recompense for their ingenuity, have made him acquainted with the description of information most generally required by that class of persons; and, at the same time, with the know-
ledge of the loss of many valuable inventions, from the inventors not being possessed of sufficient information as to what is required, either to guide them in obtaining Letters Patent, or to enable them to judge of the capacity of those to whom they intrust the drawing of their specifications.

It has been the desire of the Author briefly to explain the essential points to be observed in securing inventions by Letters Patent. In doing which, he has thought it necessary to enforce, strongly and repeatedly, the care requisite to the main objects to be attended to in keeping to the inventor the sole and exclusive right in this invention; these are—the Title, which, in the first instance, is given to the invention on application for a Patent;—and the Specification, which describes and defines the nature and extent of the Invention.

THE

LAW OF PATENTS

FOR

INVENTIONS.

CHAPTER I.

OF LETTERS PATENT FOR INVENTIONS.

We find in the earliest history of the manufactures of Great Britain, that it has ever been considered as part of the prerogative of the Crown to grant privileges of an exclusive character, as a reward to individuals who have been the first to introduce manufactures into this country. These grants may be said to be the origin of the laws of patents for inventions, and at the same time it may be safely stated, that we are indebted for the commencement of weaving woollen and linen fabrics, as well as for many other branches of our manufactures, to the privileges thus offered to foreigners to bring their
arts to this country, for it should be understood that, at the early period now spoken of, few manufactures originated with the natives of England. At that period this country might be said to be warlike, its inhabitants looking with a degree of contempt on the peaceful manufacturers, at the same time often taxing them heavily to carry on the wars; and hence privileges of incorporation, as compensation, were granted, by which all persons, within certain districts, were prevented carrying on a manufacture, unless free of a particular corporation.

So long as exclusive privileges were granted only to persons bringing new manufactures to this country, or to natives or others, for originating new inventions, these rewards from the Crown tended materially to advance trade. But a practice of another character was by degrees engrafted on this branch of the Crown's prerogative, that of granting to favourites, and also to others, exclusive rights for the sale of various articles of commerce. To such an extent had this abuse of the prerogative been carried in the reign of Queen Elizabeth, that public prosperity was sinking under its baneful effects. On the subject being brought to the notice of the House of Commons in that reign, it was stated that salt, iron, powder, cards, train oil, sea coal, brushes, pots, bottles, indeed almost every branch
of trade, was carried on by virtue of a monopoly, which had been granted by the Crown, either to favourites, or to others, for money to replenish an exhausted treasury. The examination into these improper grants called forth very decided expressions, from various members of the House of Commons, which induced Her Majesty to send a message to the House to the effect, that all monopolies should be cancelled; and many of them were put an end to; but it was not till the reign of James I., that such grants were actually destroyed, and prevented for the future, by the famous Statute of Monopolies (21st James I., c. 3), by which all monopolies were declared void; at the same time, defining the King's prerogative, in respect to the description of grants which might legally be made; amongst these were patents for inventions, which had theretofore been granted for twenty-one years, to use new manufactures, it enacted that patents should in future be granted for not more than fourteen years for "any manner of new manufactures." This Act at once eradicated the system which had been so long and so prejudicially pursued.

Having thus given a concise outline of the origin of our present law of patents for inventions, it will be desirable to consider the meaning of the word "monopoly," it being often
confounded with a patent for an invention, which is certainly not a correct definition of a grant of this nature. A monopoly may be thus defined, it is "a grant or allowance by the King to any person or persons of the sole buying, selling, making, working, or using, of anything whereby any person or persons are sought to be restrained of any freedom or liberty they had before."* Now it is evident, that a grant of a patent for an invention is the very opposite to a monopoly; for a patent, to be valid, must be for a new invention, consequently, no persons, by such a grant, are restrained from any freedom they had before. It is essential that this distinction should be borne in mind, as on it depends the whole law of patents. Some writers have been of opinion that even this limited prerogative is prejudicial to trade, preventing, as they conceive, the rapid strides of improvement, which, they imagine, would follow what may be termed a free trade in inventions, or, more properly speaking, that every invention should at once become the property of the public at large. Such propositions as these do not require very deep arguments to set them aside. Let the extra cost which is consequent on bringing any new invention to bear, and the anxiety to the inventor, be but for a moment considered, the answer will be

* Sir Edward Coke.
obvious, that no one would venture on a large outlay of monies, in realizing a new manufacture, if his neighbours and opponents in trade could immediately, on the invention being matured, proceed to work on the same plans without compensation to the inventor. Ingenuity evidently requires some encouragement and reward. What, it may be asked, can be more consistent, and, at the same time, more advantageous to the State, than to grant to the first inventor, or to the first introducer, of any valuable and new discovery, an exclusive privilege for a term of years, provided he lodge such a description of the invention as will enable the public at large to enjoy the invention more fully at the expiration of the patent right? Such is the nature of patent property.—It is a reward to the first inventor of any new means of producing a known material, or for producing a new manufacture which is useful in itself. In thus speaking of the "first inventor," the term should be understood to include the first introducer from abroad, who is held to be equally deserving of protection and reward for any new discoveries he may bring to this country. Thus, Sergeant Hawkins, says,* "It seemeth clear that the King may for a reasonable time make a grant to any one, of the sole use of an art invented or first

* Hawk. P. C. Bk. i. c. 79, s. 20.
brought into the realm by the grantee;" and in "Sheppard’s Abridgement," it is laid down that the King may make such a grant to any man, who at his own charge wit or invention shall bring in a new trade or device into the realm;* and Lord Chief Justice Tindal† said, that "a person who has learned an invention abroad and imported it into this country, where it was not understood or known before, is the first and true inventor within the Statute. The cases decided before the Statute (James I.) prove that grants by the Crown to persons who had brought any new trade into the realm, were good at common law." And it was also held in the last mentioned case that the patentee may be only an agent for a foreigner, and therefore have no interest personally in the patent.

It has, till within a short period, been a common observation, that the laws relating to patents for inventions were not adapted to give to the inventor that protection which he had a right to expect for the advantages the country at all times derives from the introduction of any new means of manufacture; this feeling arose principally from the want of information which existed amongst those interested in patents as to what was the law;

hence specifications, of valuable inventions, were constantly enrolled, from which no certain or definite knowledge, of what was really the claim of invention of the patentee, could be obtained.* It consequently followed, that when patents came into Court, having such specifications, however much the judges might be desirous of giving effect to the intention of the law, by keeping to the inventor a just recompense for his invention, still, with such documents as were formerly enrolled, it has often been impossible to support the patents; and this, in almost every case, has arisen from the patentee not defining, and, at the same time, clearly and honestly explaining, his invention. The extensive publication of the modern decisions in Courts of Law in patent cases, has, however, for the most part, removed all doubts as to patent property being secure, provided the patentee take the ordinary caution of a man of business, in making a clear and explicit specification; hence patents at the present time are taking that position amongst the various descriptions of property in England, which

they ought long ago to have arrived at; and this may, in a great measure, be attributed to the care and diligence, consequent on a better knowledge of the subject, which mark the drawing up of the larger portion of the specifications that have been enrolled within the last few years.

Every one must feel satisfied that an inventor must know where his invention commences and where it stops. This he should point out in his specification, and disclaim all the parts described which are not of his invention. In the absence of such information, other inventors, as well as the public in general, cannot know how much is secured by a particular patent; this they have a right to be informed of, and it is for this purpose the specification is required by law. Lord Eldon very justly remarked, that "they (the public) have a right to apply to the patent office to see the specification, that they may not throw away their time and labour, perhaps at a great expense, upon an invention upon which the patentee might afterwards come with his specification, alleging an infringement of his patent, when, if those persons had seen the specification, they never would have engaged in their project."* Yet how is this to be accomplished unless the patentee fully, fairly, and honestly, describes his invention, and at the same time points out how much of the

* Ex parte Koops, 6 Ves. 599; Carp. R., vol. 1, 175.
parts described constitutes the invention claimed under the patent.

By the Act of James I. the Crown is declared to have the power of granting letters patent of exclusive right for "any manner of new manufactures;" the Crown, in using the power, grants its privilege on condition that a full description of the invention shall be enrolled for the benefit of the public; at the same time, it conceives that the party in whose favour the grant is made, will take every means to make the patent most secure. The patentee is therefore judged on his own deed. If the patentee, in his specification, attempts to claim more than is new and useful, the patent is void; for the Crown has not the power of granting the exclusive use of that which is old, to any individual; and this is also the case if there be essential information kept back: and it will be clear to every one who examines the laws as at present constituted, that if an inventor be honest in describing his invention for the benefit of the public, and at the same time restrict his claim of novelty to that which is new and useful, the law will give him every protection.

By the amendments introduced by Lord Brougham's Act,* the severity of the law has been in some degree modified, a patentee having now

* 5 and 6 Will. iv. c. 83.
the right of disclaiming parts claimed by his original specification; at the same time, if the specification, at the trial of any suit or action, contains a claim of more than was new at the date of the patent, the patentee would fail in obtaining a verdict; and, further, if the suit were a writ of *seire facias* to repeal the patent, should the specification be found to contain a claim of more than was new, the patent would be declared void. It is therefore equally necessary, under the present state of the law, to use the utmost care in drawing up specifications, otherwise it will become the object of those who are desirous of setting aside a patent to proceed at once by *seire facias*. 
CHAPTER II.

ON THE CONSTRUCTION WHICH HAS BEEN PUT ON THE ACT 21 JAMES I. c. 3, s. 6.

In the former chapter the Statute of Monopolies was spoken of in general terms, it will now be desirable that so much of the Statute as relates to patents for inventions should be quoted, in order that every one may judge for himself the meaning which the particular clause, now under consideration, is intended to convey. The Statute in the first place, declares that all "grants of monopoly" are contrary to the laws of the realm; it then directs that such monopolies shall be tried by the common law of the land, it disables all persons from practising or setting up such grants, and all parties grieved by pretext of a monopoly shall recover treble damages and double costs. It then goes on to declare that the Statute does not extend to patents which had been granted for new manufactures, nor to grants afterwards to be made for new inventions, in the following words (s. 6): "Provided also, and be it declared and enacted, that any declaration, before mentioned, shall not extend to any letters patent and grants of privilege, for the term of fourteen
years or under, hereafter to be made, of the sole working or making of any manner of new manufactures within this realm, to the true and first inventor and inventors of such manufactures, which others, at the time of making such letters patent and grants, shall not use, so as also they be not contrary to the law, nor mischievous to the State, by raising prices of commodities at home, or hurt of trade, or generally inconvenient: the said fourteen years to be accounted from the first letters patents, or grant of such privilege hereafter to be made; but that the same shall be of such force as they should be if this Act had never been made, and of none other." Thus it will be seen, that this Statute does not newly enact the law, but declares that the Crown had, before the passing of this Act, the power of making exclusive grants of privilege for "the working or making of any manner of new manufactures;" it does, however, restrain the period for which such grants shall be made, to the term of fourteen years; the time having previously been twenty-one years. It is material that this Statute should be understood to be a declaratory Act, that is to say, an Act declaring what is the prerogative of the Crown, pointing out what may and what may not be legally done, for it will be evident that, if the Statute were to be read as enacting a new law, the words "to the true and first inventor or inventors of such manufactures," would preclude
a valid patent being granted to the importer of an invention communicated from abroad, but, on perusing the whole of the Statute of Monopolies, it will evidently appear that the clause respecting patents for inventions was inserted for the purpose of stating that grants of that nature were not to be considered monopolies; the laws therefore with respect to that part of the Crown’s prerogative were “to remain of such force as they should be if this act had never been made.” It has already been stated, that the earliest grants were to foreigners, and for imported inventions; it follows from what has been above stated, that the custom existing previously to the passing of the Statute of James I., should be still upheld, and such has been the case in modern decisions; patents taken out by individuals in this country for inventions communicated from abroad having been constantly supported.*

The terms of the Statute, whereby the subject matter for a patent is defined, have at times been objected to. It has been stated that the words, “any manner of new manufactures,” do not give that clear expression of what may become the object of a patent as might be desired. On a close examination of the meaning given to the word “manufacture” by our best authors and lexicographers, it will be found to be “some-

thing made by art," also "the process of making anything by art;" and these are the constructions which have ever been put on the Statute by the judges before whom patent causes have been tried. Thus Mr. Justice Heath remarked, in giving judgment in the case of Boulton and Watt v. Bull,* "I approve of the term manufacture in the statute, because it precludes all nice refinements; it gives us to understand the reason of the proviso, that it was introduced for the benefit of trade. That which is the subject of a patent ought to be specified, and it ought to be that which is vendible, otherwise it cannot be a manufacture."

Lord Eldon also said, "There may be a valid patent for a new combination of materials previously in use for the same purpose, or for a new method of applying such materials; but in order to its being effectual, the specification must clearly express that it is in respect of such new combination or application, and of that only, and not lay claim to the merit of original invention in the use of the materials."†

And in another case Lord Chief Justice Abbott said; "Now the word 'manufacture' has been generally understood to denote either a

thing made which is useful for its own sake, and vendible as such,—as a medicine, a stove, a telescope, and many others; or to mean an engine or instrument, or some part of an engine or instrument, to be employed either in the making of some previously known article, or in some other useful purpose,—as a stocking frame, or a steam engine for raising water from mines. Or it may, perhaps, extend to a new process to be carried on by known implements or elements acting upon known substances, and ultimately producing some other known substance; but producing it in a cheaper or more expeditious manner, or of a better and more useful kind. But no merely philosophical or abstract principle can answer to the word 'manufactures.' Something of a corporeal and substantial nature—something that can be made by man from the matters subject to his art and skill, or, at the least, some new mode of employing practically his art and skill, is requisite to satisfy this word.”* In the case of Crane v. Price,† where it was contended that the invention for which the letters patent were granted was not a manufacture within the meaning of the Statute of James I., Lord Chief Justice Tindal, in giving the judgment of the Court said, “The question

† Webs. R., 408 ; 4 M. & G. 580.
therefore becomes this,—whether admitting the using of the hot air blast to have been known before in the manufacture of iron with bituminous coal, and the use of anthracite, or stone coal, to have been known before in the manufacture of iron with cold blast, but that the combination of the two together (the hot blast and the anthracite) were not known to be combined before in the manufacture of iron, whether such combination can be the subject of a patent. We are of opinion, that if the result produced by such a combination is either a new article, or a better article, or a cheaper article to the public, than that produced before by the old method, that such combination is an invention or manufacture intended by the Statute, and may well become the subject of a patent.”

It has been a common practice in Courts of Law, for the counsel engaged against a patent to urge, that it is for a principle, and not a manufacture, for which the patent had been obtained. This has been the course pursued in some modern instances, though erroneously; * they having confounded the principle of action of the parts of a machine with a principle inherent in nature; a new combination or application of the former being the subject of a patent, whilst the

discovery of the latter, it has been laid down, at a very early period of patent law, would not be a good subject for a patent.

There does not appear to be any decided case of a patent having been set aside on these grounds; this may arise from the circumstance of very few patents ever having been applied for, to secure newly discovered principles, indeed it seldom happens that new principles are discovered. It must be evident to every one who has taken the trouble to examine into the question of what ought, and what ought not, to be the subject of a patent, that the discovery of a principle existing in nature is not an invention, nor is it such a discovery as can be protected, or for the use of which an exclusive privilege can be given. Such a grant would take from the public that which before existed? for although it may not be known in what manner a particular principle acts, its workings are at all times going on in nature. Thus I may instance Newton's discovery of the cause and operation of gravitation: that process of nature had ever been going on, and the falling of bodies had been mechanically and usefully applied in a variety of ways, though the cause of such action was unknown. It would have been an absurdity to suppose that a patent for all applications of the principle of this natural law could have been
granted to Newton. It has been thought desirable to make these few observations on this part of the subject in the present chapter, merely to call attention to the distinction which is drawn between the discovery of a principle existing in nature for which a patent cannot be valid, and the invention of something new in the arts, or, in other words, the combining known substances, instruments, and principles, so as to produce manufactures, which are proper subjects for patents. A future chapter will be found devoted to the word principle; for although a principle in itself cannot be the subject of a patent, the newly combining or applying a known principle to a machine, or in a manufacture, whereby it becomes in any way improved, is an invention suitable to be protected by a patent.

On a careful examination of the numerous patent cases which have been published, it will be found that the following description of inventions may be secured by letters patent.

First, A new combination of mechanical parts or instruments whereby a new machine is produced, though each of the parts be separately old and well known.

An instance of such a grant may be mentioned. A patent was taken for a machine for shearing cloth, by means of rotatory helical cutters acting in combination with a fixed straight blade, the
machine was so arranged that the cloth, in passing through it, should come under the operation of the cutting blades in a direction to be cut from list to list. This was found to be a highly useful arrangement or combination of mechanical parts producing a valuable machine; the same parts had been differently combined in a previously patented machine, in which the cloth was cut in the direction of its length. The patentee carefully claimed the combination of the parts in the manner set forth in the specification, that is, its particular character of cutting from list to list with a rotatory cutter; and as the important results depended on that peculiar character of combination, Lord Tenterden said, "If, before the plaintiff's patent, the cutting from list to list, and the doing that by means of rotatory cutters were not combined, I am of opinion that this is such an invention by the plaintiffs as will entitle them to maintain the present action," thereby supporting the patent for such new combination of old mechanical parts.∗

A patent was taken for improvements in propelling vessels, the invention consisting of a new mode of combining the parts of paddle wheels, by which the float-boards or paddles could be made to assume any desired angle in

∗ Lewis and another v. Davis; 3 Car. & P. 502; Wels. R. 488; Carp. R. vol. 1, p. 471.
working; there had been many constructions of paddle-wheels having more or less of the parts differently combined, and consequently not capable of fully producing the effect required, and the desired effect had been produced in paddle-wheels by different means. It was contended that the parts being old and each of them having been used for the same purpose before, and the result obtained being old, no good patent could be granted for a new combination of the parts which only produced a known effect. This objection, however, was overruled by the whole Court.*

It may be stated that a large number of patents are taken out for similar combinations, and a great variety of similar instances of like patents being supported might be given; but what has been above shewn will be sufficient for the present.

Secondly, An improvement on any known machine whereby such machine is rendered capable of performing more beneficially.

Under this head there cannot be given a better instance than Watt's improvement of the steam-engine. It will be known to most persons engaged in manufactures that this engine, before Watt improved it, worked by the pressure of

the atmosphere forcing the piston into a partial vacuum, produced by condensing steam by a jet of cold water thrown into the working cylinder, which not only condensed the steam, but cooled down the cylinder itself. Watt’s grand improvement was to have the condenser a separate vessel from the steam cylinder, together with the use of an air pump; by this simple arrangement the steam-engine became of such value as to realize a very large fortune to Mr. Watt and to Mr. Boulton his partner, though they had to bring several actions to protect themselves against infringements, in which they were successful, and the patent was supported during the period for which it was granted.* This patent may be said to be the first which was successfully tried for merely an addition to an old engine, though many patents have since been upheld for additions to old machinery, such improvements being now considered a most important part of the inventions by which our manufactures are constantly being improved.

Another instance may be given of an im-

* The specification of this patent was generally considered badly drawn, it giving no practical directions, but simply stated certain propositions to be worked out by the workman; fortunately the propositions were so simple that he could not fail; had the specification been well drawn it would probably have saved the larger portion of the expenses, and the patentee would not have had to go so often into a Court of Law.
provement on a known mechanical construction of a different character. A patent was taken for applying a peculiar leverage to the back and seat of an easy chair, by which the back and seat were so connected in their action by levers, that the pressure on the back was counteracted by the pressure on the seat, by which the person sitting or reclining could by the merest impulse vary the position and yet be well sustained not only after the change of position, but also during the movement. The construction of the chair therefore was old, the lever action was old, but it was new so to apply the lever action to a chair, and therefore the patent was supported.*

Thirdly, Where the vendible substance is the thing produced, whether by chemical or mechanical process, such as a new description of fabric; for instance, felts for covering the bottoms of ships,—for making hats, &c.—sailcloth—elastic fabrics, by the introduction of threads of caoutchouc (India rubber),—a waterproof fabric, by the introduction of a thin layer of caoutchouc between two surfaces of cloth; and a great variety of others.

A few instances may be given of cases which have occurred under this head.

The felt for covering ships' bottoms under the sheathing had for many years been made in sheets by hand, by the ordinary process of felting; other sheets had been made by simply pressing an even layer of fibre with adhesive material into a sheet by hand. A patent was taken for making a similar substance by machinery in a continuous length; this new fabric was made by spreading the fibres evenly on a travelling surface of wire cloth, the layer of fibres was pressed together by another moving surface of wire cloth, and in this state the continuous layer of fibres was submitted to melted pitch and tar and subsequently pressed between rollers; by this means a sheet of felt of any required length might be obtained. This patent was supported in a Court of Equity.*

A patent was taken for a mode of making an elastic fabric by the aid of India rubber. Before the date of the patent, threads of India rubber had been made, and they had been covered with silk and cotton, by winding or braiding those fibres around the threads of India rubber, and threads of such covered India rubber had been woven into elastic fabrics by using them alone as the warp; other elastic fabrics had been woven by using uncovered India rubber threads as the

warp, and in other cases as part of the warp, the remainder of the warp being of cotton or other non-elastic yarn. The patent was taken, amongst other things, for making elastic fabrics, consisting of a warp composed partly of covered India rubber threads, and partly of non-elastic threads of cotton or other fibres, and the weaving was performed in the same manner as ordinary weavings when making other elastic fabrics. It was shewn to be a useful fabric and the patent was held to be good.*

The patent for a water-proof fabric called Macintosh, may also be mentioned under this head, that patent stood on very narrow grounds. It simply consisted of joining two fabrics together by dissolved India rubber. It was proved at the trial that dissolved India rubber had been spread on a surface of one fabric, the other surface of the India rubber having flock sifted over it, thereby making a water-proof fabric; it was also a common practice before the patent to cement two fabrics together by other water-proof materials. The patent did not therefore claim the use of India rubber for making fabrics water-proof, but for a particular mode of using that material, the invention in fact being confined to

sticking two fabrics together by a layer of dissolved India rubber.*

Formerly ships were sheathed with copper, and the advantages of using copper was that it poisoned or prevented the barnacles adhering to the ship's bottom. Sir H. Davy, in order to preserve the copper, proposed to place zinc in contact so as to create a galvanic action, a trial was made on a man-of-war, and he perfectly succeeded in preserving the copper, but it was found that the barnacles stuck as freely to the preserved copper as if it were wood, and the ship quickly became so covered that her sailing was materially interfered with and the thing failed. Mr. Muntz some years after imagined it was possible that there was a point at which the copper sheathing of a ship might be preserved, and yet offer sufficient oxidation to poison the barnacles, he tried many compounds of copper and zinc, and at last discovered that sheathing of a compound of sixty parts copper and forty parts zinc, supposing both metals were very pure, would destroy the barnacles, and produce a cheaper sheathing, and which would last longer than copper; for this he took a patent, and it was supported both at Law and Equity. And Lord Chief Justice Tindal stated, that it did not signify whether the compound of copper and

zinc was new in itself, the law only required that it should be new as a sheathing for ships.*

Fourthly, Where an old manufacture is improved by some new working; the means of producing the improvement, in most instances, is patentable, whether chemical or mechanical.

A great variety of patents might be given under this head:—A patent was taken by Mr. Hall, for passing lace through the flame of gas, in order to singe off the loose fibres, and produce a more clear appearance to the lace, the operation being facilitated by the application of an artificial draft, by means of flues placed over the flame. The patentee simply claimed the right of using gas for such process, other flames, and also heated surfaces, having been before used for like purposes, on lace, as well as on other fabrics. It was objected to this patent that the invention claimed was no new manufacture, that the simple using of the flame of one lamp for the same purpose as the flame of another lamp had before been used was not the subject of a patent. "No one," said Lord Chief Justice Abbott, "could know that gas would answer the purpose till he tried, and a man who tried and succeeded in so improving a manufacture, is entitled to a patent."† His Lordship also said, the man

* Muntz v. Foster, Short-hand Notes.
† Hall v. Boot, Webs. R. 100; Carp. R. vol. 1, p. 423.
who makes an experiment with a new material that is successful, though it is for a purpose that is old, and though it be with a view to produce that which has been produced before, is entitled to the protection of the Crown and to the thanks of the public.

Formerly, the usual means of manufacturing iron was by using a blast of air, at the ordinary temperature of the atmosphere. Mr. Neilson discovered that the manufacture of iron might be greatly improved by employing atmospheric air highly heated, and he took out a patent for heating the blast of air before it entered the furnace. This patent was supported.* During the period for which such patent was taken, another patent was granted to Mr. Crane, for combining the hot blast with the use of anthracite coal, in the manufacture of iron. This patent was also supported.†

A patent was taken for a mode of making welded wrought iron tubes for gas and other purposes; it described the means to consist of using external pressure by dies or such like tools without internal support. Before the patent, the making of tubes by external pressure with internal support had been practised and was well

* Neilson v. Harford, 8 M. & W. 806; Webs. R. 331.
known. There were considerable advantages gained by leaving out the mandril or internal support: amongst others, tubes could be made longer and with much less difficulty. This patent was very strongly contested at law, the parties infringing saying that there was no invention, no new manufacture, under the Statute; it being simply the leaving out a troublesome instrument; but the judges all supported the patent, and expressed themselves gratified in being able to do so.*

A case of a chemical character may be given under this head: a patent was taken for waterproofing fabrics by first saturating them in a solution of alum and lime, and then submitting the fabrics so saturated to a solution of soap, by which a water-proof compound was produced within the fabrics so treated. Before the patent the same materials—alum, lime, and soap, had been formed into one solution, and fabrics dipped into it; this had the effect of water-proofing to a certain extent on the surface, but not internally of the fabric, this patent was simply for the different mode of using the same materials for the same purposes. In an action for infringement, the patent was sustained.

Fifthly, *The application of a known substance

or material to a new purpose, and also the application of old machines, to improve manufactures to which they have not before been applied, when a beneficial result is obtained, is the subject of a patent.

A patent was obtained for a method of discharging fire-arms, &c., in the name of Forsyth, which consisted in the application of detonating or fulminating mixtures as a priming.* The patentee, in his specification, fully described the nature of such substances, and also several descriptions of locks for discharging the detonating mixtures by a sudden blow. He stated that he wished it to be understood, that he did "not lay claim to the invention of any of the said compounds or matters to be used for priming;" and he adds, "my invention in regard thereto being confined to the use and application thereof to the purposes of artillery and fire-arms as aforesaid." Several gun makers imagined that by merely altering the lock, and producing one of an entirely different construction to any shewn in the specification, they would be able to use the detonating mixtures for priming, such mixtures being well known before the date of the patent; but in actions brought by the patentee against infringements, the claim to the exclusive use and application of the detonating mixtures

as priming, was held by the patentee, whatever the construction of lock by which they were discharged.

A patent was taken for improving the process of refining sugar, by causing the syrups to be filtered through a layer or bed of charcoal; it also claimed other things. It was notorious to every person, that before the date of the patent, almost every conceivable fluid had been filtered through charcoal, both vegetable and animal, but it could not be shewn that the syrups of sugar had been so filtered. It was not new to use charcoal as a purifying means in the refining of sugar, powder of charcoal having been stirred into the syrups of sugar in the process of refining, and then allowed to precipitate, and the syrups were filtered by bags; hence Derosne's patent was confined to filtering syrups of sugar through charcoal, and for such process the patent was sustained. *

In Watt's patent for the steam-engine, he claimed to apply a wood case or covering to the steam cylinder, in order to keep in the heat, and the patent was sustained. †

In a case for improvements in the manufacture of covered buttons, the claim of invention was for applying certain descriptions of silk fabrics as the covering material for buttons made by dies and pressure, other fabrics of silk having been before used in the same manner. In this case the same tools were used as before, and the only difference in the button produced according to the patent, from another which had before been generally in use, was the covering materials; and the same class or description of fabrics claimed to be used by the patentee when working with dies and pressure, had been used in the making of buttons by hand with a needle. The claim of the patentee was, in substance, the application of certain well known fabrics as covers to buttons made by dies and pressure, the specification stating that the fabrics were not new, nor were they new in the manufacture of buttons generally, and further, that the mode of making by dies and pressure, when considered with reference to the use of other fabrics, was not new. The patent, therefore, rested on the claim of using known fabrics by known means, producing a known manufacture, viz., buttons; the buttons, however, were improved in the nature of the fabric, introduced for the first time when working by dies and pressure.*

desirable to remark, when patents are taken for new applications of matters and machines, that many persons have supposed they will be secured by merely stating their invention to be the application of a particular substance or of a machine to a new and useful purpose, without entering into a full account of how the same is to be carried into effect. This is incorrect; there must certainly be full instructions given to the workman in order that he may adapt the means to the desired end, otherwise a patent cannot be valid; and, in fact, it will generally be found that this class of invention requires more care in preparing the title, and also the specification, than any other class of invention. Let it be supposed that Forsyth, in the case first mentioned, had merely stated in his specification, that he claimed the application of certain well known explosive mixtures as priming for fire-arms, without going into a detailed account of how that was to be done, there can be little doubt that the patent would not have been sustained.

The same observation would apply to the using of animal charcoal in the refining of sugar, supposing that to be now a new invention, whether by mixing it with the syrup, as in the one case, or filtering through charcoal, as in the other case; the mere statement that the thing is to be done is not sufficient; the best manner of con-
ducting the operation known to the patentee in all such cases must be fully described and shewn, though the claim of invention might properly rest on the application of the known substance, newly applied in some particular manufacture, and such is the case, when machines are, for the first time, applied to manufactures different from those to which they had before been used.

In referring to the cases mentioned above, it has for the most part been preferred to select such instances as have offered very small quantities of difference between the new inventions and the old manufactures, in order that an individual having improved any manufacture, or branch of manufacture, may judge more readily whether what he has done may be made the subject of a patent.

If the above five propositions be carefully examined, they may be said to contain every description of invention which can be made for the advancement of trade, and it will be clear that, to produce an invention under either of these heads, *it must be the result of art*, and consequently "*a manufacture*," such as was contemplated by the Statute of James the 1st.
CHAPTER III.

ON THE NEW APPLICATION OF KNOWN PRINCIPLES TO MECHANICAL AND MANUFACTURING PURPOSES.

In the preceding chapter, the discovery of the existence of a philosophic principle was spoken of as not being a suitable subject for a patent. It is now proposed to give some few examples of the combining known principles with known instruments or machines, whereby new and useful combinations have been brought into action, which have very properly been secured by patents, and upheld in Courts of Law. By this means a clear distinction will be drawn between the discovery of one of nature's laws, and of its application to some new and useful purpose. It will not be out of place here to remark that our best writers have ever held that "every man is proprietor of the fruit of his labour; and that to whatever extent he may have impressed additional value on any given thing by the work of his own hands, to that extent, at least, he should be held the owner of it," and such is the extent to which patent law protects new inven-
tions. It will be evident to the most moderate understanding, that an individual merely discovering the manner in which a principle or law of nature acts, does not in any way enhance the value of the principle: thus when Galileo discovered that the atmosphere had weight, and that it was by its pressure fluids were caused to rise into a pump on withdrawing the piston, and not, as before supposed, that that operation was the result of a sucking action, he did not thereby impress additional value on the law of nature, he only ascertained the correct manner of its action; had he gone on and invented the barometer,* such an application of the pressure of the atmosphere might have been the subject of

* "Torricelli, in consequence of the previous suggestion of Galileo, with regard to the ascent of water in a pump upon drawing up the piston, proceeded, in 1643, to fill with mercury a glass tube hermetically sealed or closed at one end, the other being open, and immersed in a basin of stagnant mercury. Judging that, in the former case, the water was sustained in the pump by the pressure of the air on the water in the vessel in which its open end was immersed, and that it was the measure of this pressure, he hence concluded, that mercury would in like manner be supported by it in the tube, and at a height which was also the measure of the air's pressure, or about thirteen times less than water. His experiment was completely verified, for he observed that the mercury descended in the tube and finally settled at the perpendicular height of 29\\frac{1}{2} Roman inches, whether the tube was vertical or inclined according to the known laws of hydrostatical pressure."
a patent; supposing the invention to have taken place at a time when the laws for encouraging inventions were similar to those of this country, and it would have been a good specification if the inventor had described the inverted and vacuous tube to be filled with mercury from a cup of stagnant mercury; he might then have claimed the application of the known law of the pressure of the atmosphere forcing up the mercury and indicating the quantity of its pressure, thereby producing an instrument to measure the heights of mountains, to indicate the changes of the weather, and, indeed, for any use to which it might be applicable. The invention of such an instrument evidences a combination, by the mind of man, of a law of nature (the pressure of the atmosphere) with certain known instruments (the cup and the tube), with a well known fluid (mercury). Such an invention evidently stands contradistinguished from a philosophic principle, which is the work of the Creator of all things. And the inventor, by claiming the right of using such barometer to whatever purpose it might be found useful, would not claim the principle of the pressure of the air or atmosphere, but only the application thereof to a particular purpose, to which it had never been so applied.

Steam may be said to possess three laws or
principles; first, its elastic force; secondly, the property of condensing or contracting itself into its original bulk, by being exposed to bodies possessing less caloric; thirdly, its expansive force, by which it will go on attenuating itself, provided it be not resisted by a greater force. These, however, are all natural laws, and although any one or more of them might not be known at any particular period, the mere discovery of such properties existing in steam would not be an invention,—there would be no adaptation—no new manufacture; but if an inventor had gone a step further, and used steam to press on the surface of water, contained in a vessel, having an ascending-pipe, and thereby have constructed a machine for raising water,* it would have been a good subject for a patent, had the inventor claimed the exclusive right so to use steam. Or an individual might have used the property of steam, by which it contracts itself by having its heat withdrawn, and thus have produced a vacuous vessel, into which water would be pressed by the atmosphere. Such, in reality, were the first applications of steam, these two properties having been used conjointly by Savery.† This last combination of the two

* The Marquis of Worcester's invention.
† Thomas Savery obtained a patent for his invention in July, 1698, which is the first patent on record for a steam-engine.
properties would have formed a good subject for a patent, notwithstanding each property separately, had before been commonly practised; and such would have been the case, if either or both those modes of using steam had separately been the subject of a previous patent; but the last patentee would not have been permitted to use the new combination of the two means of using steam without licence under the previous patent or patents.* It is by such steps we ultimately arrive at perfection, and every additional value that is given to a thing becomes the property of him who produces it. The next step to improvement was the use of a piston in the steam cylinder, together with the pressure of the atmosphere; then came Watt, who used the elastic pressure of steam in conjunction with the property of condensation; after him came Woolf, who used high-pressure steam expansively; all which inventions constituted suitable grounds for patent rights, as new combinations and applications of known principles. In addition to these, a very considerable number of patents have been taken for improvements in the various parts of the engine. Thus it will be seen that

though the discovery of any of the laws natural to steam could not be the subject for a patent right, the different applications of those laws to mechanical and manufacturing purposes have been the work of man, and consequently inventions such as should be protected, and should rightfully belong to the parties who first practically apply the principles under new combinations to the uses of man.

It had been long well known that the boiling point of fluids depended on the quantity of pressure to which they were submitted at the time of applying heat, thus the boiling point of water under the ordinary pressure of the atmosphere, is said to be 212°, but if heat be applied to water placed considerably above the ordinary level of the earth, that is, on a high mountain, the water will boil at several degrees below 212°, according to the height. The discovery of this law or principle, though not in itself a suitable subject for a patent, became, when practically applied, a very valuable invention. A patent was taken for evaporating syrups in vacuo, in the process of refining sugar. By the application of this known principle, a very material improvement took place in that branch of our manufactures, owing to the low degree of temperature at which the aqueous parts evaporated, thus preventing the destructive effects of
high temperatures, formerly so injurious in sugar refining.

The principles or laws natural to the lever were known at a very early period, though if such were not the case, and the correct manner of its action were now discovered for the first time, it is evident that such discovery would not enhance the valuable properties really existing; consequently such a discovery could not be the subject matter for a patent right; yet, on the other hand, any new combinations whereby these principles or any of them could be brought into more extensive use, would unquestionably become subjects for patents; such, for instance, as cranes, windlasses, capstans, or, as in a more recent instance, a new combination of levers to the back and seat of a chair, whereby a self-adjusting of the weight was produced to the back and seat.*

In this manner, the discoveries of the known laws of the pendulum, gravitation, and, indeed, almost every law or principle of nature, might be gone through to show that such discoveries should not become the objects of patents, supposing the correct manner of their action to be now ascertained for the first time. An instance from more modern times may be given.

Dr. Faraday discovered that carbonic acid gas, when under a pressure of several atmospheres, was reduced from an æriform to a liquid state; this was a law or principle consequent on the matter being so circumstanced. Sir H. Davy, when informed of this principle, made a discovery of a further principle in this liquid; he found that it was quickly acted on by heat, which produced great expansive force, and readily gave off such heat when brought in contact with cold surfaces; this led him to observe that probably at no distant period the fluid might be used as a power for working machinery. Here then are two principles discovered to exist in a particular matter by two individuals; let it be supposed that each had taken letters patent for their respective discoveries, up to this point nothing further than philosophic truths would have been obtained, but no practical application thereof. Mr. Brunel invented an engine, to be worked by the expansive force of condensed carbonic acid gas, by alternately bringing heat and cold to act, by a peculiar apparatus, on that fluid, thus taking up the two principles discovered by Faraday and Davy. Now, for the sake of argument, let it be supposed that this engine has been matured, and that it has become of public utility, in superseding the steam-engine, in consequence of the smallness
of space occupied, and other benefits the inventor anticipates. Before he could proceed, he must satisfy the two prior patentees, otherwise he would be liable to an injunction from the Court of Chancery, by either or both the discoverers of the two principles natural to the matter employed by the inventor of the engine. It may here be asked, what man would venture on making efforts to produce an engine, thereby subjecting himself to great anxiety and expense, and more particularly to the payment of dues for patent right to others, before he could even enter on the production of his invention, and liable (if he could not agree with these persons) to law suits? thus would the public and the inventor be deprived of all practically useful discoveries. The case would have been very different had the previous parties produced practical and useful results by an application of the principle, and had taken patents for the same, the public would then have been benefited; and had Mr. Brunel required the practical results of either of the said parties, then he would very properly be required to purchase the products of the previous patents, to apply them in a new manner. Let it not however be supposed that the minds of the individuals making such discoveries of principles are underrated, on the contrary, the highest respect is due to both,
but it will be evident that their discoveries are not of that kind which should secure to them the right of toll on all future practical applications of such principles; such a course would lead to endless difficulties, and tend to prevent those rapid strides to improvements by which the existence of the present law has been marked.

The minds of individuals constantly engaged in experimental philosophy, however successful in tracing nature's workings to their source, are seldom found making any practical application of nature's laws to the uses of man; they leave this department to minds of another order. There are some instances to the contrary of this position, but they may be said to form the exception rather than the general rule.

It has been thought desirable to go thus at length into this part of the subject, and incur the hazard of appearing prolix to some readers, rather than that any of those interested should not clearly understand what is meant by the judges who have constantly held that no patent can be supported for a merely philosophic principle. The words of a justly celebrated writer, who most clearly draws the distinction between the discovery of one of nature's laws and an invention, may very properly close this chapter; he says, "We do not accredit man with the
establishment of law for matter. He does not give to matter any of its properties, but he arranges it into parts, and by such arrangement alone does he impress upon his workmanship the incontestable marks of design, not that he has communicated any power to matter, but in that he has intelligently availed himself of these powers, and directed them to an obvious and beneficial result."
CHAPTER IV.

OF A CAVEAT.

There is, perhaps, no part of the Law of Patents which has been less understood than that which relates to a Caveat. In the present chapter it is proposed to give a clear account of the object of, and the advantages to be derived by, entering Caveats.

A Caveat* is an instrument, lodged at certain offices, requesting to have notice of any party applying to secure a patent for a similar invention to that named in the Caveat. Let it be supposed that A, has made an invention relating to a particular branch of manufacture; for instance, improvements on machinery used for spinning cotton: before he takes out his patent, he is desirous of having machinery for the invention made, that he may put it to the test of practical experiment; and in the event of failure, he may avoid going to the expense of a patent. In getting the invention made, he has to confide to workmen: to prevent such confidence being

* A Caveat lasts twelve months and may be renewed from year to year.
taken advantage of, he enters a Caveat against any application which may be made for improvements in machinery for spinning. Should any person apply for a patent for an invention relating to such branch of manufacture; A, receives notice to that effect, and is allowed seven days to say whether he considers that the invention of B, will interfere with his Caveat. If A, considers that it is possible the invention of B, may interfere, he returns for answer that he opposes the application.

The opposition being thus entered, the patent is stopped, and A, applies to the Attorney or Solicitor-General to issue a summons, calling all parties before him, on a day named.* A, first explains his invention; after him, B, does the same: each person being heard separately; the Attorney or Solicitor-General, taking care that neither party shall know the nature of the invention of the other.

The Attorney or Solicitor-General being thus in possession of the two inventions, decides whether they are alike or interfere with each other. In case they are not alike, separate patents may be obtained by each party; but in case the inventions are alike, and each party have come honestly by the invention, then no patent

* Usually seven days’ notice of such appointment is given, and never less, but by consent of both parties.
would be granted, unless A, and B, agree to take out a patent for their joint benefit; but if it appears that the party applying for the patent, or the opponent has abused confidence reposed in him, or has otherwise dishonestly possessed himself of the invention, the Attorney or Solicitor-General will give the patent to the party to whom the invention rightly belongs. This is the whole object and effect of a Caveat; and it will be necessary to guard inventors against imagining that this instrument possesses more power than it really has. A Caveat does not entitle an inventor to publicly use or sell his invention; and it should be fully understood, that if A, enter a Caveat, and B, put the invention into public use after the Caveat has been entered; A, could not prevent B, or any other person making or selling the invention; and, further, in case A, take out a patent after B, had put the invention into public use, though the invention was communicated from A, to B, such a patent would be void. It will therefore be seen, that great care should be observed in confiding to workmen the nature of a new invention; the better way is, to employ more than one person, where the nature of the machinery will allow of the parts being made separately. It should, however, be understood, that the working and using the invention by A, and his workmen for the purpose
of experiment, so long as it is not published to the world by sale or common use, does not injure a patent: thus, at a trial of a patent cause, several witnesses spoke of having seen the invention at the workshop of the plaintiff's workman some months before the sealing of the patent: this was not considered such a publication as to injure the validity of the grant.*

It has been often remarked, by persons unacquainted with the practice and particulars of this part of the progress of a patent, that Caveats are useless; that a petitioning party might, by explaining a different invention from that he intends to secure, get the advantage of an opponent having the identical invention. To prevent the possibility of such an occurrence, the Attorney or Solicitor-General impounds the drawings and description produced, and confines the petitioner to the invention shewn. Such is the attention paid by these officers, that it is scarcely possible for any party to make a false move without its leading to his own prejudice. This practice of retaining documents produced by the petitioner is now constantly pursued whenever a patent is opposed; and Mr. Attorney and Mr. Solicitor-General have note-books in which they record the nature of the invention described to

them; thus a complete check is raised against designing parties; and it may not be out of place here to remark, that such is the regularity and diligence observed on these occasions, that the oldest practitioners can scarcely call to mind an instance of malpractice being successful, or of an injury arising out of the rules which govern the working of a Caveat, though attempts have often been made by a certain class of individuals, to make a false step to gain particular ends.

Caveats are entered at the Attorney and Solicitor-General's offices, and it is the duty of the clerks of those offices to give notice to all parties having Caveats for like inventions, immediately on receiving the petition referred from the Home Secretary of State. The Caveats entered at the above-mentioned offices, obtain notice on the first stage of a patent, and in case of opposition, the opposing party has to lodge the costs, of the hearing before the Attorney or Solicitor-General, on entering the opposition.*

* This is a rule of modern date, which has effectually put an end to those vexatious oppositions which often took place for the purpose of delay. This regulation has, therefore, proved highly beneficial. Formerly a patent might be delayed a week or more, yet the opposing party never appear. It was generally considered that the Attorney or Solicitor-General had the power to direct the opposing party to pay costs, yet it was never resorted to.
Caveats are also entered against a patent at other stages; but in these instances they are what are called Specific Caveats, as they are entered against a particular patent, the name of the petitioner being mentioned; and this description of Caveat does not extend to any other patent for a like subject, but only the one particularly mentioned.

The second stage where a patent can be opposed is on what is called the Bill, which is prepared at the Patent Office; and in case of entering opposition, it must be by a Specific Caveat, setting forth the petitioner's name, as well as the object of the invention. In opposing a patent after it has passed the Report, the practice is to charge the opponent with all the expenses of the hearing before the Attorney or Solicitor-General, and in order to ensure this, 30l. are lodged with the Clerk of Inventions at the Patent Office, to meet the expenses of the hearing. The object of lodging such a sum of money is to defray the costs of the hearing of both parties; and in case the inventions are declared to be alike, the remainder of the money goes to pay the extra fees which the petitioner has been put to in consequence of the opposition taking place after the Report has been granted. Should the inventions not interfere the one with
the other, then, after paying the expenses of the hearing of both sides, the remainder of the 30l. is returned to the opposing party.

The last stage of opposing a patent is at the Great Seal. The Lord Chancellor seldom refuses to pass a patent under the Great Seal, when petitioned so to do; and the costs incurred depend on the decision of the Chancellor; but in most instances of modern times, these expenses have been thrown on the opponent, for it is usually held that the petitioner ought not to be permitted to go on spending his money, and then be stopped in the last stage, but that the proper time for entering opposition to any patent is before the Attorney or Solicitor-General, either when the patent is on the Report or Bill.
CHAPTER V.

THE CARE TO BE OBSERVED IN OBTAINING PATENTS FOR INVENTIONS.

In addition to the Statute Law by which a patent is tried, there are certain rules laid down by the Courts of Law, that require the fullest consideration in order to render a patent valid: amongst others, and the first to be inquired into by an inventor, is the "title," or general description which is to be given to his invention on presenting a petition to Her Majesty.

An inventor having sufficiently matured his invention to satisfy his mind that it is worth the expense of being protected by a patent, makes application to Her Majesty by petition,* setting forth that he has invented a certain something, stating in general terms the object thereof, and, at the same time, praying that the sole use, benefit, and advantage may be granted to him, his executors, administrators, and assigns, for the term of fourteen years, according to the Statute.

* For the proper forms of petition and declaration, and the other documents necessary in the progress of a patent, see Appendix.
The petition is supported by a declaration, in which the "title" of the invention is set forth, the petitioner solemnly declaring that he is, to the best of his knowledge and belief, the first and true inventor thereof, or that he has become possessed of the invention from abroad, and that it has never been practised in this country.* So essential is correctness of the title, that several patents have been set aside in consequence of the inaptness of the description thereby conveyed;† it therefore becomes the more desirable that every inventor should fully comprehend what is required to be understood by the word "title."

This part of my subject, though exceedingly simple when a little consideration is brought into

* There are separate patents for England, Scotland, and Ireland, and they are in every respect distinct from each other. The laws in each country are alike, and the decisions of one country are quoted in the Courts of the other; but there was no Statute Law in Ireland, until Lord Brougham's Act.

action, has been thought to be very difficult. The title should be such a description of the invention, that the public may know the object of the invention. Thus if it be "Improvements in the slides of steam-engines," every person having a Caveat relating to steam engines, and therefore interested, will readily understand that a certain well known part of the steam-engine is proposed to be improved; but let it for a moment be considered, that, if under such a title, a patentee were to claim improvements in other parts of a steam-engine, in addition to his improvements of the slides, this would evidently be a marked disagreement between the title and the specification, and the patent would be bad. Many will probably remark, that such is too palpable a case ever to occur in practice; yet it will be found, that although this particular case may not have taken place, there have been others, equally clear, which have occurred, and on which patents have been declared void. Of these it is proposed hereafter to speak more fully, the present object being, in the first place, to draw attention to this important branch of the law, in order to impress on the minds of inventors the absolute necessity for a little thought and due care in every part of the busi-
ness, bearing in mind that the Crown grants the patent on condition that a fair and clear statement of the invention shall be made. In selecting a title for an invention, the precise point—the nature and extent of the invention—should be accurately determined; whether it be a manufacture which has not heretofore been made or used, or for an improvement of a known manufacture, or for a new combination of old mechanical parts for producing an old manufacture in a more advantageous manner, by improving the quality or producing the article of an equal quality but at less cost, or for a new or an improved process or manner of working, to produce some advantageous effect in the material acted on; or whether the invention be for the improvement of a known engine or machine whereby the same may be made to work more beneficially, or produce an useful result which has not been before obtained by it: this should be first clearly ascertained, because either, correctly pursued, may be made the subject of, and secured by, letters patent.

In order more readily to come at a knowledge of what should be the title given to a particular invention, it will be necessary to instance some patents which have been set aside, from having had improper titles, and by this means to point out the rocks upon which others have split, and
thus produce a chart for future guidance. In a patent, the title of which was, "An improved method of lighting cities, towns, and villages," the specification described an improved lamp for lighting cities, towns, and villages; the patent was declared void, in consequence of the title in the patent, and the description of the invention in the specification not conforming to each other.* In the first instance, the lamp was described as being applicable to lighting lighthouses, harbours, shipping, &c., which was beyond the extent of the title, which only named cities, towns, and villages; this would have been a hard case, supposing it to be the only objection to the validity of the patent; but, in addition to this, there was a more important objection,—it was evident that there was no "improved method of lighting cities, towns, and villages"—lamps, of a slightly different construction, had been used for that purpose prior to the granting of the patent; therefore, had the title of the patent been for "An improved lamp," or for "Improvements in lamps," there is no doubt that the patent would have stood, and have been of great value to the patentee, and either of those titles would have protected the patentee in every application of his invention. It will be desirable that this

* Cochrane v. Smehurst, 1 Stark, 205; Dav. P. C. 354; Carp. R. vol. 1, p. 311.
title should be more closely considered: it is for "An improved method of lighting," &c. A lamp maker receives notice on his Caveat, and his invention being perhaps precisely the same as that for which the patent was applied, the individual, knowing that his invention was an improvement in ordinary lamps, would naturally say, this application for a patent has no relation to mine,—I have no improved method of lighting, but only an improvement on a lamp which is in common use. The patent would therefore be permitted to proceed, and be granted in favour of the petitioner, and to the prejudice of the party holding the Caveat; thus would great injury be done if disguised titles were permitted. The law considers any intentional disguise or mis-leading, either in the title or in the description of the invention, to be a fraud on the Crown, the condition of the grant being, that the public may have the benefit of the invention after the expiration of the patent; also, the public is to be protected against parties taking out letters patent by the titles of which it would appear to be for one object, whilst in the specification other matters are described; were such permitted, there would be no protection to others who may be proceeding with similar inventions; for, if disguised or indefinite titles were allowed, inventors (pursuing similar discoveries) having a
right of notice,* would be misled, and would permit patents to pass without opposition, from not imagining that the application was for an invention which would interfere with their own, and thus would constant injustice be done to others.

In a patent granted for "A new or improved method of drying and preparing malt," the specification described that the invention consisted in submitting malt to a high degree of temperature, thus producing a material which was to be used for colouring beer, &c : there was no new means of drying such malt described; but the same might be done by any of the known methods used for making malt; the only difference was, in raising the same to a considerably higher degree of temperature, thereby making it applicable as a colouring matter, to be used, not for the purposes of making beer, but for colouring it. This patent was also declared void, for the want of agreement of the specification with the title, the invention not being in reality the article known by the name of malt, but a colouring matter produced from malt; †

* All persons entering Caveats for any invention, have notice given them, on application being made for a patent for a similar invention to that named in the Caveat.
† The King v. Wheeler, 2 Barn. and Ald., 349 ; Carp. R. vol. 1, p. 394.
and for such process and application the patent should have been taken; this patent should, therefore, have been taken for "An improved colouring matter for beer and other liquids;" under such a title the patent would undoubtedly have stood. The consequences which would arise if the title first mentioned had been held sufficient to cover the invention as specified, will become manifest on asking what would have been the case had a Caveat been entered for "any improvements in the materials used for colouring beer and other liquids." No notice would have been given. But let us suppose the party having the Caveat, by some accident did receive notice, could he for a moment imagine that an improved colouring matter was behind such words as "A new and improved mode of drying and preparing malt?" The law only uses common sense in adjudicating on these subjects. The common sense of this title is, that there was some new mode of drying the article called malt, and the result to be produced was malt, not a new substance to be obtained by old means from malt. There are other instances of a similar kind, but the above will be sufficient; and it has been clearly pointed out by the judges, that to attempt, by the title or the specification, to claim more than is the actual invention of the patentee, is fatal
to the patent; this is also the case where the title and the description contained in the specification are not in conformity with each other.

The Lord Chancellor (Lyndhurst) in giving judgment, said in respect to a title, that "the description in the patent must unquestionably give some idea, and, so far as it goes, a true idea, of the alleged invention, though the specification may be brought in aid to explain it. The title in this patent is for 'Certain improvements in copper and other plate printing.' Copper-plate printing consists of processes involving a great variety of circumstances. The paper must be of a particular description; before it is used it must be damped; it must remain damp a certain time, and must be placed in a certain temperature; the plate must be duly prepared, and duly applied, and various processes must be gone through before the impression is drawn off, and brought to a finished state. An improvement in any one of these circumstances,—in the preparation of the paper, for instance, or in the damping of it, &c.—may truly be called an improvement in copper-plate printing." *

In a recent case,† the title was "Improvements in Carriages." The specification described the

* Sturtz v. De la Rue and others, 5 Russ. 322; Carp. R., vol. 1, p. 467.
invention to be applicable only to carriages where German shutters were used. The cause was tried in the Court of Queen’s Bench, when a verdict for the plaintiff was returned, excepting in regard to one plea, which stated that the invention was not applicable to all carriages, and that the title was vague and uncertain. On this question, the Jury found that the invention was not applicable to carriages in general, and the Court ultimately decided that the patent was bad. The cause was then carried into the Exchequer Chamber, and the judgment of the Court of Queen’s Bench was reversed. Lord Chief Justice Tindal, in giving the judgment of the Court, stated, that “the words ‘improvements in carriages,’ do not necessarily import improvements in all carriages, but may be held to apply to some carriages only. Mere vagueness appears to us to be an objection that might be taken on the part of the Crown to the grant of the letters patent, but not after they are granted. If any fraud had appeared to have been practised on the Crown in obtaining it, the patent might be held void. There is no evidence of fraud in this case. But the patent is held bad in the Court below, merely on the ground that the title is so large as to be capable of importing a different invention from that in the specification. We think it unsafe, without further authority, to lay
down a rule so large as that laid down in the Court below, but consider it would be doing an injury to many patents, if we were to hold this void merely because the title is in the same terms as are capable of application to some other invention than that in the specification, and that, too, without any grounds of fraud."

The title, then, should be such a statement that the public may know the object of the invention; the specification should describe the manner of producing the invention, and distinctly point out that which is new and claimed by the patentee, from that which has been before used. The title must not be less comprehensive than the invention, but must be such as to give a general knowledge of the invention, and the specification must define the same.
CHAPTER VI.

OF THE SPECIFICATION, OR DESCRIPTION OF THE INVENTION.

Having, in the previous chapters, given an account of the means of obtaining patents, and having more particularly pointed out the care to be observed in drawing the title to be given to the invention, the next and most important point to be considered by the patentee is the proviso contained in the patent which requires that a specification should be enrolled, fully setting forth the nature of the invention and the manner in which the same is to be performed. It has been before remarked that the title is to state, in general terms, the nature of the invention; the specification, on the other hand, must not only fully describe the manner of performing the invention, but should also define the precise point which the grant is intended to secure. The proviso in the letters patent, which renders the enrolment of a specification necessary, declares that the letters patent shall become void if the patentee "shall not particularly describe
and ascertain the nature of his said invention; and in what manner the same is to be performed, by an instrument in writing under his hand and seal and cause the same to be enrolled.” Under this proviso it is not enough that the patentee should describe the manner in which his invention is to be performed, but he must also ascertain the nature thereof; for it has been held that although a patentee had most fully and accurately described the manner in which an invention was to be performed, yet as he had omitted to ascertain the nature of the invention, so as to separate it from old matters necessarily described in the specification, the patent was void.* A badly drawn specification will court opposition, whilst a clear, definite, and decided description will be the best preventive of infringement.

In drawing up a description or specification of an invention, there are three things to be carefully attended to:—

First.—That the specification be so clear that a workman, or other qualified person, shall be able to realize the invention by pursuing the description and course pointed out in the specification.

Secondly.—That the invention claimed as new

shall not be greater than what is indicated by the title contained in the patent.

And, Thirdly.—The extent of the invention claimed must be new and useful, and the invention of the patentee, or that he is the first importer of the same.* What is meant by new and useful, is, that should there be two or more points claimed as new in the specification, and either of them be old, or fail to produce the beneficial result described by the specification, the patent would be bad in law.

It is evident, that so much having been done in the arts and manufactures, there will at times be found considerable difficulty in ascertaining what is new in some branches of manufactures; yet it will be equally evident, that when a beneficial result is obtained and a manufacture brought into the market of a better quality, or produced at a less cost, there must be some point of novelty, and this point of novelty in most instances may be the subject of a patent. If the specification describe clearly the means of producing the beneficial result, and claim only for the point of novelty, which is the cause of improving the manufacture, or of reducing the price, such a patent would unquestionably stand. An instance may be given:—a patent was

* There have been patents granted to the executors of inventors.
granted for "Certain improvements in evaporating sugar, which improvements are also applicable to other purposes." The invention consisted of an apparatus for introducing streams of air, into fluids to be evaporated; the air, as it forced its way through the fluid (which was kept heated), carried off the aqueous part, and concentrated the matter which was contained in it. The specification set forth and described a series of small tubes, descending nearly to the bottom of the boiler or pan, they being connected above to main pipes, which were placed over the fluid to be evaporated. The small descending tubes were numerous, and placed at equal distances, over the surface of the bottom of the pan, thus was an equal distribution of streams of air obtained throughout the whole of the fluid, which rapidly carried off the aqueous part, and at a considerably lower temperature than what is necessary for boiling and evaporating in the usual manner. In an action brought by the patentee against a party for an infringement, it was proved in Court, that the forcing air into fluids to facilitate evaporation was not new, but had been practised in the year 1754; a publication of some experiments having been made at that time in the Transactions of the Royal Society; in addition to which, a patent had been granted in 1822 (which was some years before
the plaintiff's patent), wherein the principle was described, amongst other things, to be applicable to sugar: in both these instances the means employed were the same, and consisted of a perforated coiled pipe, placed at the bottom of the pan or boiler.* By a series of extensive experiments, it was found that the air would only pass through a few of the first holes of a coiled pipe, but no even distribution could be made to take place; the coil of pipe, therefore, failed to produce the desired effect, and was wholly inefficient. The patentee of the last invention fully described, and distinctly claimed, a particular apparatus, made up of the descending tubes, from main pipes, placed above the surface of the fluid, by which an even distribution of the air was obtained. The judge (Lord Tenterden) at the trial, in giving his opinion, said, although the principle of the invention—that of blowing air

* This patent of 1822 was probably bad in law owing to the publication of Hale's experiment of 1754; it did not, therefore, interfere with the second patent. If, however, there had been no previous publication, and the patent, in 1822, had been the first application of the principle of introducing streams of air into fluids to facilitate evaporation, and the apparatus useful, then the second patent would have been an infringement, notwithstanding the means described in the last patent were far more effective, and the second patentee must have taken a licence under the first patent before he could use his improved mode.
into fluids to facilitate evaporation—was not new in itself or in its application, yet, as there could not be a patent supported for a principle, there could consequently be patents granted for any number of means for carrying the known principle into effect, "so long as there is a distinct and essential difference in each of the means." In an application for a new trial, the judges confirmed this judgment, and the patent was held to be good.* Now, had the patentee claimed generally the introduction of streams of air into fluids, and not confined his claim to the particular means or apparatus described in the specification, the patent would have been bad. It will generally be found, that the great object of patentees is so to word their specification as to claim every means of producing a certain result, with a view to shut out all future improvement by other persons: thus are patents made weak by overclaiming, and, consequently, are declared void when they come into a Court of Law. Such a course of claiming is correct when it is certain that the principle has never before been applied to the same purpose; in which case a patentee who first conducts a manufacture, or constructs a machine, according to a particular principle may claim for applying the principle to that

manufacture, or to the machine, this would not be claiming a principle, but only the application of it to some described manufacture or machine and the principle would be open to all the world to be applied to other manufactures and to other machines. But when a principle is known to have been applied to a particular manufacture or machine, then the only subject matter open is some different mode of applying the principle, some better combination of mechanical or other means for bringing about a more useful result. The chief care of a patentee should be, so fully to describe the means which he knows to answer, that a workman may make the invention by following the description, and he should claim such means, or only such parts of them, as are his invention, leaving any future invention, for producing a similar result, to be judged of when it comes out, whether it be or be not an infringement of the original patent; if it be proved to be essentially different in the means, although on the same principle, and that principle has been before known and applied to the same purpose, it would be no infringement. If on the contrary, the last means of producing the desired object be proved not to be an essential change, but only a variation, then the same would be an infringement of the original patent, though the patentee had only claimed the particular means specified.
In the instance just given, the infringement was an apparatus, having but one main pipe, for introducing the air to the descending tubes; whereas, the patentee had described, and shewn by drawings, three main pipes; this was a variation, but no new invention, all the essential properties of the patent were retained; there was no substantial change, but it was in reality the same apparatus, and it was so considered by the Court.

A patent was granted for an apparatus for measuring gas, by the revolution of a peculiar wheel, partly immersed in water, the spokes or vanes forming chambers for measuring the gas, which, according to the patent, was introduced through the axis. After the patent was specified, another person made a similar apparatus, varying only in the means of introducing the gas into the chambers of the wheel, thus simplifying the apparatus. The patentee afterwards found it desirable to use the means last discovered for introducing the gas. In an action brought for an infringement, the circumstance of the patentee using an improvement discovered by another person was brought against the validity of the patent; but it was proved that the invention as described in the specification would work advantageously, and that the improvement could not exist without the original invention of the
patentee, the patent was therefore held to be good.* From this decision it may be drawn, that where an improvement to a patent is made after the enrolment of the specification, it becomes the property of the patentee, provided that the improvement cannot be used by itself, but, to be useful, must be superadded to the patented invention. This is but doing justice to the original inventor, for every one must feel that few inventions can be brought to such a state of perfection in a few months as to defy improvement; it would be hard indeed if a person, by merely making an improvement, were to have the right of taking the originally patented invention, without the previous existence of which, his improvement would never have been suggested. It should be understood that if the party, who made the important improvement in the gas meter, had taken a patent for such improvement, which he might have done, the original patentee could not have used the improvement without a license under the second patent.† Thus a patent offers no real stop to the

progress of invention, and it is of great importance in most cases to the original patentee, to have his invention rendered more valuable by subsequent improvements; a patent granted to another person for an improvement of his invention can in no way injure a patentee's right, but it may hasten to bring the original invention into general use. In such cases it has often been the interest of original patentees to become interested in such second patents; and amongst others there is this important advantage resulting from such a course of proceeding,—the original patentee becomes interested in the best means of carrying out his invention, for a more or less considerable period beyond the grant of the original patent. In these cases the improver of a previous patent simply obtains a share of the advantages brought about by his improvements, therefore the original patentee must necessarily be a gainer.

Another error which patentees very often fall into, is, when describing the materials of which certain parts of their machinery or apparatus are to be composed, they use the following, or similar expressions: "or any other fit and proper material or materials," after naming one which is known to answer.

In a patent granted for drying paper, by passing it against rollers heated by steam, the
patentee described a machine, the point of invention being the drying the damp paper by conducting it against heated cylinders or rollers. In the machine there was an endless fabric, which conveyed the paper against the heated rollers, and in the specification the patentee, after having described the nature and the description of the fabric used, went on to state, that "any other fit and proper material might be used." It was proved in Court, that no other description of fabric would answer the purpose. The judge held the specification to be bad, as it tended to mislead the public, for any description of fabric, other than that described, spoiled the paper, by what is called cockling it.* It should be understood, that the fabric described in the specification formed no part of the claim of invention; therefore, had the patentee confined his description to that which he knew would answer, the patent on that ground would not have failed; at the same time, had any other fabric been found to answer, it could not have been used by others, without the essentials of the patent invention, that invention being an arrangement or combination of known materials, to produce a beneficial result as described, the

materials themselves forming no part of the claim of invention, they being old.

It would be difficult to point out what quantity of invention is required to support a patent, supposing the specification to be well drawn; yet it may be stated, with some degree of confidence, that the smallness of the quantity of invention is not an objection to a patent, provided it is new and useful; more depends on the utility than the extent of invention. In the case of Lewis and Davis's patent for shearing cloth, before mentioned, there were three improvements claimed, one in the following words: "The described method of shearing cloth from list to list by a rotatory cutter;" having, in the specification, fully described a machine for that purpose. It was proved that a rotatory cutter had been used in machines to shear cloth in the way of its length, the plaintiffs having put in a former patent of their own containing such a machine.* It was also proved by the defendants, that, before the date of the patent, a model of a machine to shear cloth from list to list by a rotatory cutter was brought from America and shewn to several

* Where a second patent is taken for an improvement on a former patent, as was the case in the above instance, the first patent and specification must be noticed in the pleadings, although the infringement is only on the second patent.
manufacturers. A machine had also been commenced to be constructed, but was destroyed by the Luddites. It was further proved that shearing cloth from list to list by hand, and also by machinery having other descriptions of cutters, were well known. Lord Chief Justice Tenterden said, "It appears that a rotatory cutter to shear from end to end was known, and that cutting from list to list by means of shears was also known. However, if before the plaintiffs' patent the cutting from list to list, and the doing that by means of rotatory cutters, were not combined, I am of opinion that this is such an invention by the plaintiffs as will entitle them to maintain the present action." On an application for a new trial, it was argued that the novelty of the invention was properly the subject for the verdict of the jury, and that his Lordship had not so put the question. Lord Tenterden remarked, "I told the jury that if it could be shown that the plaintiffs had seen the model or specification, that might answer the claim of invention; but there was no evidence of that kind, and I left it to them to say whether it had been in public use and operation before the granting of the patent. They found that it had not, and I think there is no reason to find fault with their verdict." Mr. Justice Bayley concurred with Lord Tenterden, and observed, "If I make a discovery, and am
enabled to produce an effect from my own experiments, judgment, and skill, it is no objection that some one else has made a similar discovery by his mind, unless it has become public.”* There was another point of great importance decided in this case; the patentees stated one of the improvements to be “the application of a proper substance fixed on a cylinder to brush the surface of the cloth to be shorn.” In the specification a method of performing that operation was described. This part of the invention was afterwards found to be unnecessary, and was abandoned. It was held that that circumstance was not injurious to the patent, the inventors having thought the improvement serviceable at the time of obtaining their patent.

This case strongly supports that of Dollond’s patent, where the invention had been made and privately used by another person long before the

* Lewis and another v. Marling, Webs. R. p. 493. Immediately a patent is sealed the invention is considered to be in public use, even before the enrolment of the specification. This is important to be known, as many persons, having patents of later dates than others, have imagined by enrolling their specifications first, they thereby obtain the first publication of their inventions. This is incorrect, the priority of the date of the patent itself is the point to be considered; priority of date in the specification is immaterial.
patent. No actual public use or publication could be shewn; the patent was, therefore, held to be valid.*

It may be desirable here to remark, that if it had been found, on coming into Court, that the specification of Lewis and Davis's patent, just mentioned, had omitted to define the extent of their claim,—that of cutting from list to list by rotatory cutters,—the judge could not have ascertained the extent of the invention intended to be secured, and the patent would not have been supported. The patentees having, however, confined their claims of novelty to that which could not be shown to have been in public use, the patent was sustained. A patent was taken out for a machine for making bobbin-net or twistlace: in the specification the patentee fully described the machine, but did not in any way point out how much was to be considered as new, and claimed under the patent. The judge (Lord Chief Justice Gibbs), in his charge to the jury, said, "If you think Brown (the patentee) has invented a perfectly new combination of parts from the beginning, though all the parts separately might have been used before, his specification would be good; but if you should be of opinion that a combination of a certain number

* Dollond's Case, 2 H. Bl., 470 and 487; Webs. R. 43; Carp. R. vol. 1, p. 28.
of those parts had previously existed up to a certain point, and that Brown took up his invention from that point only, adding other combinations to it, then his specification, which states the whole machine as his invention, is bad."* Lord Eldon, in another case, states the law in similar terms; he said, "There may be a valid patent for a new combination of materials previously in use for the same purpose, or for a new method of applying such materials; but in order to its being effectual, the specification must clearly express that it is in respect to such new combination or application, and of that only."† A patent was taken in the name of Minter for an "improvement in the constructing, making, or manufacturing chairs." The patentee, in the outset, described generally the nature of his invention, he then explained the nature and use of each of the parts shewn in a drawing, disclaiming all parts of a chair known and in use, and concluded his specification with the following words:—"What I claim as my invention is the application of a self-adjusting leverage to the back and seat of a chair, whereby the weight on the seat acts as a counterbalance to the pressure against

the back of such chair as above described." The patentee having obtained a verdict against parties for infringement, an application was made to set aside the verdict. It was argued by Mr. Godson, on behalf of the defendants, that they did not use the same arrangement of parts as those described in the specification.

Lord Chief Baron Lyndhurst asked whether it was not a colourable evasion.

His Lordship remarked, that any application of the self-adjusting principle to the back and seat of a chair producing this effect, that the one acts as a counterbalance to the other, would be an infringement of this patent, but nothing short of that.

Mr. Godson. Yes, my Lord, and therefore every application of a lever to the back of a chair would be an infringement.

The Lord Chief Baron. No, a self-adjusting lever.

Mr. Godson. He has claimed by the specification the use of the lever, for fourteen years, to the backs of chairs.

The Lord Chief Baron. It is not a leverage only, but the self-adjusting leverage; and it is not the self-adjusting leverage only, but it is the self-adjusting leverage producing a particular effect, by means of which the weight on the seat counterbalances the pressure against the back.
Their Lordships refused the application, and sustained the patent.

From what has been said in respect to the construction put on the various specifications mentioned, a tolerably correct judgment may be arrived at as to what ought to be the style in which any invention should be claimed. It is true that there may and often do arise cases of considerable difficulty, particularly where great progress has been already made in any particular branch of our manufactures,—where, from a slight improvement, very considerable results are found to be obtained, and yet, from the simplicity of the change, the cause of the improvement can scarcely be pointed out in the way of a claim to invention;—in such cases, the judgment of those only who have constantly made the drawing of specifications their particular study and profession, should be depended on. The following cases may be instanced, Galloway v. Bleaden* (for paddle-wheels), Elliott v. Aston† (for buttons), Russell v. Cowley and Dixon‡ (for gas tubes), Derosne v. Fairrie § (for sugar), and

Crane v. Price* (for iron), where the inventions depended each on a very small change, producing however important results, and they were accurately defined and proved to be useful, and the patents were sustained.

The Court of Common Pleas, by their unanimous judgment in the case of Crane v. Price,† very fully described the class of inventions which might be secured by letters patent. This patent, it should be kept in mind, claimed the making of iron, by combining the use of anthracite coal with hot blast. The Court said, "We are of opinion, that if the result produced by such a combination is either a new article, or a better article, or a cheaper article to the public, than that produced by the old method, that such combination is an invention or manufacture intended by the Statute, and may well become the subject of a patent. Such an assumed state of facts falls clearly within the principle exemplified by Lord Chief Justice Abbott,‡ where he is determining what is, and what is not, the subject of a patent, namely, 'It may, perhaps, extend to a new process, to be carried on by known implements or elements acting upon known substances,

‡ The King v. Wheeler, 2 Barn. and Ald. 349; Carp. R. vol. 1, p. 394.
and ultimately producing some other known substance, but producing it in a cheaper or more expeditious manner, or a better or more useful kind.’ And it falls also within the doctrine laid down by Lord Eldon,* ‘that there may be a valid patent for a new combination of materials previously in use for the same purpose, or for a new method of applying such materials; but the specification must clearly express that it is in respect of such new combination or application.’” There are numerous instances of patents which have been granted, where the invention consisted in no more than in the use of things already known, and acting with them in a manner already known, and producing effects already known, but producing those effects so as to be more economically or beneficially enjoyed by the public. It will be sufficient to refer to a few instances, some of which patents have failed on other grounds, but none on the grounds that the invention itself was not the subject of a patent. We may first instance Hall’s patent,† for applying the flame of gas to singe off the superfluous fibres of lace, where a flame of oil had been used before for

† Hall v. Boot, Webs. R. 100; Carp. R. vol. 1, p. 423.
the same purpose. Derosne's patent,* in which the invention consisted in filtering the syrup of sugar through a filter, to act with animal charcoal, and charcoal from bituminous schistus, where charcoal had been used before in the filtering of almost every other liquor except the syrup of sugar. Hill's patent, above referred to, for improvements in the smelting and working of iron; there the invention consisted only in the use and application of the slags or cinders thrown off by the operation of smelting, which had been previously considered useless, for the production of good and serviceable metal, by the admixture of mine rubbish. Again, Daniell's patent,† taken out for improvements in dressing woollen cloth, where the invention consisted in immersing a roll of cloth, manufactured in the usual manner, into hot water.

According to the law, patents are granted to persons at their own risk, whether or not the inventions will be beneficial to the public; and exclusive rights are given to individuals for any new inventions which they have made, or first introduced into this kingdom from abroad, on condition that such inventions shall be so de-

† The King v. Daniell, Carp. R. vol. 1, p. 453.
scribed, that the public at large may, from the specifications, be able to make and use the inventions after the expiration of fourteen years: and patents are granted as a matter of course, should there be no opposition by Caveats. The whole responsibility of making a patent valid is thrown on the patentee. It will be almost unnecessary, after what has been already said, as to the fully describing the invention, to state, that any hiding, or keeping secret an essential part of an invention, is fatal to the validity of a patent.*

The time allowed for specifying an invention is two, four, or six months, which depends on the Attorney or Solicitor-General. In case the patent be only for England, two months are allowed for specifying; but if the declaration state it to be the intention to take a patent in Scotland, then four months will be allowed; and if for Scotland and Ireland, then six months are allowed, after the sealing of the patent, for specifying the invention; the patentee being secure from the date of the grant, he may make and sell his invention prior to the enrolment of the specification. The reason for allowing the length of time for drawing up the specification, is to give the patentee full opportunity to try his in-

* Sturtz v. De la Rue and others, 5 Russ. 322; Carp. R. vol. 1, p. 463.
vention, that he may call in the aid of practical men, and make a perfect description. In the case of the gas-meter patent, before spoken of, there was an objection taken to the validity of the patent, that the inventor, after the sealing the patent, and before the enrolment of the specification, made some changes in the arrangement of the parts of his invention; these he put in his specification as part of the invention secured by the patent. Lord Tenterden said, "The objection really is, whether a patent is void, when the inventor, having had in his mind at the time of applying for it, an invention capable of producing the effect he represented it to be capable of producing, but having brought that invention to a greater degree of perfection within the time allowed by his patent for making the specification, he introduces into that specification a different species of mechanical parts from those he first conceived. No case has ever decided that, and I think it would be extremely dangerous to lay down any such doctrine; I do not see why time is allowed to prepare a specification, except upon the idea, that the inventor has not, at the time of obtaining his patent, brought his invention to the degree of perfection that he may be thought capable of doing, and therefore he is allowed further time to do it. If, in the interval, the invention is perfected, so as to
approach a perfect accomplishment of the object originally in view, I do not see that it can be any objection to the patent." It has also been decided that an inventor may call in the aid of scientific men to complete his invention;* but a patentee must not claim the invention of another, although the title is large enough to include not only the patentee's invention, but also the invention of another. The introducing of the invention of another into the specification of a patent which was not granted for it, would be a fraud on the Crown, and the patent would thereby become void. It is important that patentees should well understand this, because a very improper practice has lately grown up. A party writes to a patentee, stating that he has, or that he is engaged for a party who has, an invention which would come within the title of the patent, offering that such invention shall be specified under the patent, provided the patentee will come to an agreement; and in some few cases, patentees have been unwise enough to specify other persons' inventions, as well as the invention for which the patent was granted. In all such cases the patents are unquestionably void.

The specifications, when enrolled, are open to the inspection of the public, and copies may be had. The best means of ascertaining whether a patent has been granted, is to examine the books kept at the office,* for which no charge is made. Here may also be ascertained the date of the grant, by which much trouble will be saved, as well as expense otherwise incurred for examining the books at each of the Inrolment Offices.

* 4, Old Square, Lincoln’s Inn.
CHAPTER VII.

AN ACT TO AMEND THE LAW TOUCHING LETTERS PATENT FOR INVENTIONS.

Having, in the preceding portion of this work, treated of the Law of Patents for Inventions, according to the construction which has been put on the Statute of James I., it now becomes desirable to speak of the law as amended by Lord Brougham’s Act.*

Before the passing of this Statute, the specification must ever remain in the precise form in which it was originally enrolled; if that deed contained any flaw which injured the validity of the patent, in that state it must be judged.† In case of infringement, the patentee, with a specification bad in part, could not safely proceed against the parties, and where proceedings have been instituted under such circumstances, the objections taken to the specification have prevailed against the validity of the patent. If we examine into the various patent causes which are reported, it will be found that, in the larger

* 5 and 6 William IV., c. 83.
† Clerical errors only could be altered, with the sanction of the Master of the Rolls.
portion of the cases where the patentees have not been successful in keeping to themselves the exclusive right of their inventions, the cause of failure is to be attributed to the patentee’s claiming more than was new at the time of sealing their patents, or otherwise, that they had not properly specified the invention. The number of these instances which are published, do not exhibit more than a very small part of those patentees who have suffered great injury by the strictness of the old law, which declared the whole of a patent invalid, if it were found to be bad in part. Very few of the many patents so circumstanced have come to the knowledge of the public, by far the larger number of patentees having before coming in Court been advised not to attempt to defend their patents. That a patentee should be restricted in his specification to claim, and have secured to him, only so much as is actually new, is highly necessary to the protection of the public; at the same time, that a patentee should lose every part of his invention, because he has been anticipated in any, and, in some cases, a very small portion thereof, is a severity in the law which ought to be and has been mitigated, by permitting a patentee, at any period of his patent, to disclaim parts of the invention contained in his specification; and, in addition to
disclaiming part of the specification, or of the title of the patent, he may amend the title of the invention, and also the description contained in the specification, where the same are found to be defective. This, it should be observed, applies to patents sealed before, as well as those passed after, the Statute.

In thus giving more security to patent property, the rights of the public have not been overlooked. The permission to amend the title of the invention, or the specification of a patent, is very properly guarded with the necessity of obtaining the sanction of the Law Officers of the Crown before any alteration or disclaimer can be made; and, further, the disclaimers or alterations must not extend the quantity of invention previously contained in the specification. The words of the Statute are,—"Any person who, as grantee, assignee, or otherwise, hath obtained or who shall hereafter obtain letters patent, for the sole making, exercising, vending, or using of any invention, may, if he think fit, enter with the Clerk of the Patents of England, Scotland, or Ireland, respectively, as the case may be, having first obtained the leave of His Majesty's Attorney-General or Solicitor-General in case of an English patent, of the Lord Advocate or Solicitor-General of Scotland in the case of a Scotch patent, or of His Majesty's Attorney-
General or Solicitor-General for Ireland in the case of an Irish patent, certified by his fiat and signature, a disclaimer of any part of either the title of the invention or of the specification, stating the reason for such disclaimer; or may, with such leave as aforesaid, enter a memorandum of any alteration in the said title or specification, not being such disclaimer or such alteration as shall extend the exclusive right granted by the said letters patent; and such disclaimer or memorandum of alteration, being filed by the said Clerk of the Patents, and enrolled with the specification, shall be deemed and taken to be part of such letters patent or such specification, in all Courts whatever."

This clause of the Act will doubtlessly prove of the highest value to the patentee, or the holders of a patent. By it he has an opportunity of striking out any part of the invention ascertained to be bad in law, in consequence of want of novelty or want of utility, and which would otherwise be fatal to the validity of the patent itself. The patentee has also, as before remarked, the power of making any alteration in the description of the invention, which may be thought incorrect, or wanting in clearness.

It may be stated, with some degree of confidence, from what has already been done in
amending specifications* and titles of patented inventions, under the above clause, that there will be no doubt of obtaining the consent of the Law Officers of the Crown, unless there should appear to have been a fraud on the part of the patentee, by his knowingly enrolling a specification which did not fairly and fully explain his invention, and clearly point out what he conceived to be new; hence arises the necessity for a patentee to be honest and careful in drawing up the title and also the specification of his invention, otherwise on application to amend he will be refused: in which case the patent would remain liable to the same strict construction which has heretofore been the practice, and the patentee or holder of the patent would fail to recover against infringement. In addition to the necessity of obtaining the sanction of the Attorney or Solicitor-General to an amendment of an English patent, the first clause of the Statute states that Caveats may be entered against alterations or disclaimers, and the parties entering the same may be heard in opposition; thus is another guard raised to prevent a patentee intentionally enrolling a specification

* For the form of documents, and other information requisite in making application to the Attorney or Solicitor-General to enrol a disclaimer or memorandum of alteration, see Appendix.
deficient in description or with too extensive claims, merely with the hope of being able at any time to amend the same, which would unquestionably have often been the case, had not the Legislature very properly put such checks as are contained in the first clause of the Statute. It has been decided that a patentee having had a bad specification, can only recover damages for such infringements as are made after enrolling a disclaimer and alteration, and not for any infringements, however extensive, committed before making the specification good in law.* In a case the jury found that one part claimed was not useful, and the Judges held that the patent was thereby rendered void altogether; at the same time they expressed great pleasure in knowing that the patentee could, by entering a disclaimer, set up all the useful part of the patent; and a disclaimer was afterwards allowed. In the same case considerable doubts were raised as to the sufficiency of the description of the specification, but the jury found, after contending evidence, that it was sufficient. The patentee, subsequent to the trial, was permitted to enter a memorandum of alteration, more fully explaining the mode of performing the invention, by giving a fresh drawing and description; and this was allowed, after the strongest op-

position, by the defendants in the original cause,* as well as by other manufacturers,—Counsel being heard on both sides by Mr. Solicitor-General (Rolfe).

In another case, where the patentee at a trial obtained a verdict, there was considerable doubt whether the specification should not have set forth, how iron was to be separated from the schistus employed in the process; the mode of doing so was not known to chemists or sugar refiners in this country, and on application to the Court, the Judges granted a new trial.† But the patentee was advised to make certain alterations and disclaimers, and no new trial was had, because there was then no doubt of the validity of the patent, and it has never again been questioned. It has been decided that a patentee after having entered one disclaimer and memorandum of alteration, may, even after an adverse verdict in a trial at law, (because of the still defective state of the specification,) enter another disclaimer or alteration, in order more fully to correct that document,‡ and such is the proper desire on the part of the Judges to give a

† Derosne v. Fairrie, Webs. R. 154; Carp. R. vol. 1, p. 664.
patentee every proper support in order that he may fully enjoy the exclusive right of any invention that he has made, that even after verdict against the validity of a patent in a writ of *scire facias* to repeal letters patent, it was stated by *Lord Chief Justice Tindal*, that the proper course would be, if the patentee "thinks that the judgment of the Court of Queen's Bench will be against him, to enter a disclaimer before such judgment is actually given, and pray the Court to suspend their judgment." *

The second clause of the new law gives to the Crown the power of re-granting or confirming a patent in the event of its being discovered that the invention had been in slight previous use. The words are,—"If in any suit or action it shall be proved, or specially found by the verdict of a jury, that any person who shall have obtained letters patent for any invention or supposed invention was not the first inventor thereof, or of some part thereof, by reason of some other person or persons having invented or used the same, or some part thereof, before the date of such letters patent, or if such patentee or his assigns shall discover that some other person had, unknown to such patentee, invented or used the same, or some part thereof, before the date of such letters patent, it shall and may be

lawful for such patentee or his assigns to petition His Majesty in Council to confirm the said letters patent or to grant new letters patent, the matter of which petition shall be heard before the Judicial Committee of the Privy Council; and such Committee, upon examining the said matter, and being satisfied that such patentee believed himself to be the first and original inventor, and being satisfied that such invention or part thereof had not been publicly and generally used before the date of such first letters patent, may report to His Majesty their opinion that the prayer of such petition ought to be complied with, whereupon His Majesty may, if he think fit, grant such prayer; and the said letters patent shall be available in law and equity to give to such petitioner the sole right of using, making, and vending such invention as against all persons whatsoever, any law, usage, or custom to the contrary thereof notwithstanding: Provided, that any person opposing such petition shall be entitled to be heard before the said Judicial Committee. Provided also, that any person, party to any former suit or action touching such first letters patent, shall be entitled to have notice of such petition before presenting the same.” *

* For the rules of practice before the Judicial Committee of the Privy Council, see Appendix.
This clause was evidently inserted to meet several cases which have heretofore occurred, such as Arkwright, for spinning, where the patent was declared void in consequence of some of the mechanical parts described in the specification, and not disclaimed, being on the trial proved to have been in previous use. There was also, amongst other cases, that of Daniells for dressing or finishing woollen cloths. At the trial of this patent slight previous use was proved; in both these instances the inventions were of the greatest possible benefit to the public, owing to the perfection to which the patentees had brought the respective manufactures. In speaking of these cases, it is taken for granted that the evidence on which the patents were set aside was the truth; but there are instances in which perjury has been more than suspected. Under such circumstances, it is highly desirable the Crown should have the power contained in the new law, more particularly as it is in no way to be feared that the public will be injured by the Privy Council advising the Crown to re-grant letters patent, without a strong and equitable case being made out in behalf of the patentee or his assigns. There have been only three applications under this clause of the Statute, the first* was in consequence of the invention having been

* Baron Heurteloup's Patent.
published in a foreign scientific work, which was to be found at the British Museum, and other libraries and places in this country, their Lordships thought that that would not in law invalidate the grant, but confirmed the patent. In another case the application was made, because of a previous publication in an English scientific work; but it was further proved that a description of the invention was to be found in the specifications of previous patents; their Lordships refused to advise the Crown to confirm the letters patent. *

By the fourth clause the Crown has now the right, with the advice of a Judicial Committee of the Privy Council, to extend the grant seven years † beyond the original term of fourteen years, for which patents are in the first instance granted. This clause was inserted to enable the patentee or his assigns to obtain such an extension without the expense of an Act of Parliament, (which it was formerly necessary to obtain,) in cases where fourteen years could be proved not to be sufficient for giving a just recompense for the benefit derived by the public from the improvements brought about by an

† The Privy Council have now the power, under the Act 7 & 8 Vic. c. 69, to advise the Crown to extend a patent for a further term of fourteen years.
invention. Several patents have been extended under this clause, and in all cases, however opposed, where the patentees have not, in the opinion of the Privy Council, been benefited in a manner commensurate with the benefits the public have obtained by the use of the patents. In a case,* where the parties holding the patent had made a very large sum of money, but where it was shewn, that for four or five years the patentees had had to contend at law and in equity to defend the patent against infringement,† Lord Brougham in giving judgment expressly stated, in granting an extension of six years, that it was not because the patentees had not derived large profits, but because other manufacturers had unfairly attempted to obtain possession of the invention before the patent expired, and that they ought to be taught to respect the rights of others. In this, and several other cases, the new letters patent were granted to the assignees of the original grant, and doubts were raised whether the Crown under the Statute had power to grant to assignees, and a further Act was granted with respect to this point and also to correct other matters.‡

There are other clauses in Lord Brougham’s

* Whitehouse’s Patent for tubing.
† Russell v. Cowley.
‡ 7 & 8 Vic. c. 69. For this and the other Statutes, see Appendix.
Act of great value to the holders of patent property, but the consideration of which will be found in the chapter where the law proceedings to be taken under a patent are explained. The only other part of the Statute to which attention need be called in this chapter is the last clause, which is to the intent that all persons are restrained by penalty from using any words with a view to have it supposed that they are the patentees of some patented inventions, when in reality they have no such grants. Thus it will be seen that the Legislature, in making alterations in the Law of Patents for Inventions, has with great care ensured to the patentee every possible protection, at the same time it has secured the public against being injured, by a patentee having a grant to which he is not strictly entitled; and it may be stated, with some degree of confidence, that if a patentee has in his specification described a really new and useful invention, should he have had the misfortune to have described it badly, or to have claimed more than was new and useful at the date of his patent; if he be subsequently well advised, he will be able to retain full and exclusive right to so much of the invention contained in his specification as is justly due to him. Indeed it appears next to impossible to upset a patent containing a new invention.
CHAPTER VIII.

ON THE CLAUSES AND PROVISOS CONTAINED IN LETTERS PATENT.

Having given information as to the means to be employed in obtaining letters patent for an invention, and the care to be taken in drawing a title, and the description or specification of an invention, it will be desirable next to consider the clauses and provisos contained in the patent, they forming part of the law by which these grants are judged. The form of the patent being given in the Appendix, it will not be necessary to repeat the clauses here; and it will only be requisite to refer to them according to the numbers with which they are marked, so that the reader may be able readily to refer to each particular clause.

(No. 1.) The first part of the patent recites the petition, and sets forth the title which has been given to the invention.

(No. 2.) The second part relates to the granting of the sole use of the invention to the inventor for fourteen years, whereby all other persons are restricted from using the invention,
without the licence, in writing, first had and obtained from the patentee; and persons are restrained from counterfeiting or imitating the invention, and from making any addition thereunto, or subtraction from the same. This clause directs justices of the peace, and other officers, not to interfere with the inventor in the performance of his invention.

(No. 3.) The third part directs, that the patent shall be void, if contrary to law, or prejudicial and inconvenient to the public in general, or not the invention of the patentee, or not first introduced into this country by him.

(No. 4.) The fourth part declares, that letters patent shall not give privilege to the patentee to use inventions for which patents have been already obtained by others.*

(No. 5.) The fifth part relates to the manner in which letters patent may become void, when divided into more than twelve shares. The object of the clauses which have already been mentioned may be clearly understood by reading them over: but great attention is required to the present clause, there having been but few de-

* In the event of a new patent requiring the use of a previously patented invention, or any part thereof, the new patentee must obtain leave, in writing, of the previous patentee; otherwise he cannot work his invention till the previous patent has expired.
cisions which directly relate thereto, it is therefore necessary to be more particular in guarding patentees in the sale of any part of their right, which, if done without great caution, might render the patent void. It will be found, that the patent is declared void if it become divided into more than twelve shares, or if more than twelve persons are directly interested as partners in the benefits and profits of the invention, or if it become vested in, or in trust for, more than the number of twelve persons. Under a somewhat similar prohibitory clause formerly contained in letters patent, it has been decided, that a patent which had passed to assignees by bankruptcy, and was worked by them for the benefit of the creditors, exceeding the number of persons allowed by the patent, did not invalidate the grant. *

The object of this clause is to prevent an extended partnership, at the same time to give as much facility as possible to the sale of useful inventions. This is important to patentees, as an inventor may have the assistance of a sufficient number of persons to enable him to mature an invention, however intricate it may be, whilst the public is protected from injury from any specious projects; the patentee being limited in making shares of

the direct interest in his patent, to a number too small to produce any very seriously bad consequences. Under this clause it has lately been held that an exclusive license forms no part of a patent, in fact that a patentee may grant licenses in any form he may think fit, and to any number of persons.*

(No. 6.) The next clause in the patent relates to the specification, which has been already explained. This clause also declares that the patent shall become void should the patentee refuse to supply the articles of the patent to Her Majesty's service on such reasonable terms as Commissioners, administering the particular department of the service to which the invention applies, may determine.

(No. 7.) The last clause directs, that the patent shall be construed in the most favourable manner for the patentee; it also declares, that the patent shall be valid, in case the same, from inadvertency of the Clerk of the Crown, be not enrolled. It will be desirable to observe, that this last clause has sometimes been construed to relate to the enrolment of the specification, which is erroneous. It is the duty of the Great Seal Clerk to enrol the Privy Seal Bill, from which the patent is copied; the clause, therefore,

relates to that document, and has no reference to the specification, which the patentee is bound to enrol within the time named in a prior clause, otherwise the patent becomes void.
CHAPTER IX.

ON THE LEGAL PROCEEDINGS TO BE TAKEN TO PROTECT LETTERS PATENT.

It has been before remarked, that a well-drawn specification is the best preventive to infringement, whilst the contrary is the greatest inducement to those who are desirous of pirating an invention, to do so. It is constantly the practice, as soon as a new and useful invention comes out, for persons in the particular branch of trade to which it relates, to get copies of the specification, with a view to take the opinions of legal and scientific individuals acquainted with the law of patents, to ascertain whether the specification is so drawn as safely to secure the invention, or whether the same might be infringed, with the possibility of setting up a good defence, in case of proceedings being taken by the patentee. Many instances might here be stated where a whole trade have expressed themselves determined to use a particular patent, and have only waited for the enrolling of the specification, to judge whether it might be infringed with impunity. In a recent instance, a patent was obtained,
and the trade had generally intimated that they were determined to use the invention without the consent of the patentee, unless he came into such terms as they might offer for their working under the patent. The patentee was naturally alarmed, and took every advice to make the patent secure; as soon as the specification was enrolled, a number of copies were obtained by persons in the trade, and opinions taken; but the specification being considered good, the trade found that their only course was to come into the terms of the patentee, or be prevented manufacturing the invention; and this would be the case with the largest portion of patents, were the patentees to take proper care in securing themselves, by fully and actually describing their inventions, and by claiming only that which is new and useful; and on no consideration to include in the specification an invention of another person, or an invention other than that for which the patent was granted.

Some persons imagine that they may put any invention into a specification which will come within the title of the patent, whether such invention was originally contemplated or not. This is erroneous, and it should be fully understood by patentees, that the introduction into a specification of any new invention, other than that for which the patent was granted, would be
a fraud on the Crown, and would render the patent void; and it is believed that an Attorney-General would not help a patentee, thus acting fraudulently, by allowing him to disclaim such parts of his specification, as had been obtained from others, and improperly introduced and claimed. The time allowed for enrolling the specification to a patent, is for maturing the invention under protection of the patent, and, if necessary, to allow the patentee to call in the aid of scientific and practical men, in order to make the invention as perfect as possible, that the specification may be complete for the benefit of the public as well as for the patentee.

In case of infringement, the patentee may either at once proceed by action to recover damages, or he may apply to the Court of Chancery, to grant an injunction to restrain the parties from making, selling, or using the invention.

In bringing an action against a party for an infringement, the patentee should be prepared with proof of the grant of the letters patent, for which purpose the producing the deed itself, or proving an official copy, is sufficient; next there must be proof of the due enrolment of the specification which is usually done by an official copy, and it must be shewn that the invention is new and useful, that the
description in the specification is such that a person might produce the invention by pursuing the same, and the infringement must be clearly proved.*

Mr. Justice Buller, in an action tried before him, stated—"Wherever the patentee brings an action on his patent, if the novelty or effect of the invention be disputed, he must shew in what his invention consists, and that he produced the effect proposed by the patent, in the manner specified. Slight evidence of this on his part is sufficient, and it is then incumbent on the defendant to falsify the specification."† The patentee having proved his case, the defendant may call evidence to shew that he has not infringed the patent, or he may put in evidence to prove that the invention is not new, or that the patentee was not the first inventor, or the first who introduced the invention into this kingdom, or that the title in the patent, and the description in the specification do not conform to each other, or that the specification is otherwise defective. If the defendant succeed in

* Circumstantial evidence will be sufficient to prove an infringement. Hull v. Boot, Webs. R. 100; Carp. R. vol. 1, p. 423.
establishing either of these positions, the patentee will not support his action; on the other hand, should the defendant fail, then such damages will be awarded by the jury as they may think just.* By the fifth clause of Lord Brougham's Act, a very important alteration has been made in the law, so far as regards the pleadings to be resorted to by a defendant. Formerly, in an action for infringement of a patented invention, the defendant, under a plea called the "general issue," that is, by generally denying the infringement, as well as every other right, might give evidence against the validity of the patent in every way in which a patent is vulnerable; nor could the plaintiff ascertain on what points the defendant intended to ground the defence; but now he will be obliged to give the plaintiff notice of the description of objections on which he intends to rely, and evidence will not be received at the trial which is not strictly within the notice so given. By this means the patentee will be in a position to judge at once as to what evidence it will be desirable for him to call, in order to anticipate the defence. Be-

* It is not usual to ask more than nominal damages in a Court of Law, because the Court of Chancery will require the defendant to render an account of the quantity of infringement, and damages will be awarded accordingly.
fore this Act was passed, a plaintiff was obliged to prepare himself with evidence and argument on every point.

In order as much as possible to prevent the vexatious infringements of patents which have so commonly attended every valuable discovery, the third clause of the Statute enacts, that in case "a verdict shall pass for a patentee or his assigns, or if a final decree or decretal order shall be made for him or them upon the merits of the suit, it shall be lawful for the judge who shall make such decree or order to give a certificate under his hand, that the validity of the patent came in question before him, which record or certificate being given in evidence in any suit or action whatever touching such patent, if a verdict shall pass, or a decree or decretal order be made in favour of such patentee or his assigns, he or they shall receive treble costs in such suit or action."* It has often been con-

* Since the passing of the Act, many certificates have been given, and in one patent, the plaintiffs in three subsequent actions recovered treble costs. By the Statute, 5 and 6 Vic., c. 97, this has been altered, and a patentee can now only obtain full costs. The words of this section of the Statute are as follows:—"And be it enacted, That so much of any Clause, Enactment, or Provision, in any public Act or Acts, not local or personal, whereby it is enacted or provided, that either double or treble costs, or any other than the usual costs between party and party, shall or may be recovered, shall be, and the same are, hereby repealed. Pro-
sidered that, when a patentee has failed in obtaining a verdict in an action for an infringement, the patent is void; yet such is not the case; a patent is not legally void, unless it be declared so when tried by a writ of *scire facias*; consequently, if a patentee fail in an action for infringement (which may often happen for want of some particular evidence), he may proceed to bring other actions, and the former want of success would not injure any new cause of action.

In many instances, it will be desirable to prefer proceeding in the Court of Chancery, which will often be found a more summary mode, more particularly where the object is rather to put a stop to the infringement than to seek damages. It will here be desirable to explain, in the words of *Lord Eldon*, the principle on which the Court of Chancery proceeds, in case of an application for an injunction. His Lordship said,—"The principle upon which the Court acts in cases of this description is the following:—where a patent

vided always, that instead of such costs, the party or parties heretofore entitled, under such last-mentioned Acts, to such double, treble, or other costs, shall receive such full and reasonable indemnity as to all costs, charges, and expenses incurred in and about any action, suit, or other legal proceeding, as shall be taxed by the proper officer in that behalf, subject to be reviewed in like manner, and by the same authority, as any other taxation of costs by such officer."
has been granted, and an exclusive possession of some duration under it, the Court will interpose its injunction, without putting the party previously to establish the validity of his patent by an action at law. But where the patent is but of yesterday, and upon an application being made for an injunction, it is endeavoured to be shewn in opposition to it, that there is no good specification, or otherwise, that the patent ought not to have been granted, the Court will not, from its own notions respecting the matter in dispute, act upon the presumed validity or invalidity of the patent, without the right having been ascertained by a previous trial; but will send the patentee to law, and oblige him to establish the validity of his patent in a Court of Law. It will, however, grant him the benefit of an injunction.”

In applying to the Court of Chancery, a bill is filed, praying an injunction to restrain the infringement. In the bill, the patent and specification are set forth, and affidavits are filed in support of the application. The evidence to be contained in these affidavits should go to shew that a proper specification has been enrolled, that the patentee is the first inventor, and the infringement must be clearly pointed out, in

which case the injunction is usually granted on an *ex parte* application.

The defendant, in putting in his answer, may shew that he has not infringed the patent; or he may attempt to shew that the invention is not new, or that the specification is not correct, or that the patentee is not the inventor or first introducer of the invention into this country. It will then be for the Lord Chancellor to say whether the injunction shall remain in force, or whether there shall be an issue tried in a Court of Common Law. Or the defendant may apply to have the injunction removed on evidence, without first putting in his answer.

There have been cases where it was difficult to obtain evidence as to the actual infringement, in consequence of not being able to see the defendant's means of making a particular manufacture; in such cases, where good evidence is given in support of the application for an injunction, the Court will direct an examination of the works, or will grant an injunction, leaving it to the defendant to shew that he does not use the patentee's invention; but this course has only been pursued where the article produced has been so similar in appearance to that made by the patented invention, that the natural inference was, that the means of manufacture were the same.
It has been shewn, that by the Statute of James I. the validity of patents should be tried and determined by the common law of the realm, consequently a patent must not be considered void, unless it be declared so in a suit at law expressly to try the validity of the grant; and the description or process of law proceedings is termed a writ of \textit{scire facias}; it is prosecuted in the name of the Queen, it being considered, that as a patent cannot be declared void, except contrary to law; or that the Queen, as grantor, has been deceived either by the patentee being proved not to be the first inventor, or the first introducer of the invention; or that the patentee has not, by the specification, complied with the provisos contained in the letters patent, or that the grant has been made for one object, whilst in the specification another object is described; or that the specification is in other respects imperfect. In any of these cases, the Queen is considered to have been deceived in making her grant of letters patent; and therefore the Queen's name is used in the inquiry, to ascertain whether the patent has been properly made; yet, although the name of the Queen is used in the proceedings, the party who originates such proceedings pays the costs of the action; that is, so much of them as fall to the share of the plaintiff in the cause. And he has also to give
a bond to secure the defendant's costs in the event of the writ failing.

It is considered in law, that all the Queen's subjects are injured by an illegal grant of letters patent, therefore any person may petition Her Majesty to direct a writ of *scire facias* to try the validity of a patent. In a trial of this description, similar evidence in support of the novelty and utility of the invention, and that it is properly described, will be required by the patentee, as in actions for infringements.

In case the verdict is for the Crown the patent is void, and the Court directs the patent to be cancelled; but if the verdict be for the defendant (the patentee), then the patent is declared valid. It may be desirable here to add, that patents are now treated with the greatest attention in all the Courts of Law and Equity; and the Judges will not permit frivolous objections to be taken against the validity of a patent; but, on the contrary, they put the most favourable construction both on the grant and the specification. And in the event of a verdict in favour of the Crown, and consequently against the validity of a patent, the Court, on a reasonably strong case being made, would probably spend their judgment, and allow the patentee to amend his specification, by disclaimer and abatement, and thus save any valuable matter
of invention which might be found in the patent.*

Before a patentee takes any proceeding, either at Law or in Equity, to stop an infringement, he should carefully consult his Counsel, and also scientific men, to ascertain whether the specification may not be amended under the Statute (5 & 6 W. 4, c. 83), by enrolling a disclaimer or memorandum of alteration, according to the first clause; for should the specification contain a claim of more than was new at the sealing of the patent, or any other flaw, and there be no disclaimer or alteration enrolled before the commencement of proceedings in law, the patentee would be non-suited, and have to pay the costs of the action. The first clause, amongst other things, enacts, "that no such disclaimer or alteration shall be receivable in evidence in any action or suit (save and except in any proceeding by scire facias) pending at the time when such disclaimer or alteration was enrolled, but in every such action or suit, the original title and specification alone shall be given in evidence."

In case a patentee should fail in any suit or action brought for an infringement, owing to its being proved at the trial that some part of the specification or the title given to the invention was bad in law, this would not destroy

the validity of the patent; on the contrary, the specification and title might subsequently be amended by disclaimer or memorandum of alteration, and the patent thereby rendered perfectly valid and good in law, provided the specification really contained a new and useful invention, and in case the same defendant continued to infringe, fresh proceedings might be taken against him; thus will a defendant no longer be permitted to use a patented invention because he may be able in the first instance at a trial to prove a legal objection to some portion of the specification. A case of this description may with advantage be given. Mr. Brunton took a patent, in which he specified an invention for improvements in chain cables, in capstans, and in anchors. At the trial it was proved that the anchors were not new, at the same time it was allowed by all parties that the invention, so far as it related to cables was not only new but highly useful. The patentee failed in supporting his patent, owing to the want of novelty in the anchors; thus was he deprived of the whole of his invention. According to the law, as it is now constituted, he might, even after the trial, have entered a disclaimer to so much of the specification as related to anchors, and the patent would then have been good for the remainder.

In drawing up a disclaimer and memorandum
of alteration great care must be observed, as on
the wording of such documents much will often
depend. A patentee should not, therefore, be
induced hastily to pursue such a course, but
should have the advice of those best acquainted
with patent law, before he determines on any
alteration.
CHAPTER X.

There have been, at various times, objections raised to the laws relating to patents, and many propositions have been made for amending those laws. One objection against them is, that the knowledge of science being possessed by only a few, a patent right ought not to be tried by a judge and jury, as is the present practice; but, in place thereof, it has been recommended that such causes should be tried by a commission of scientific persons, chosen according to the particular object of the invention.

When it is found, which has often been the case, that a large number of persons engaged in a particular trade or manufacture, combine together with a view to upset a patent, in consequence either of their profits being lowered, or their business taken away altogether, unless they obtain a licence from the patentee to use the new invention; knowing that this has often
occurred, it would not be from persons engaged in the particular branch of manufacture, that a commission should be chosen for trying a patent right; they are interested in the result, and, though parties might be highly honourable, yet it would be against the general principles of the Laws of England to place persons, so situated, in the judgment-seat.

It would generally be supposed that persons engaged in any manufacture would be the first to estimate the value of a new invention which related to their particular branch; yet this is not the case; on the contrary, it will be found that in many instances, where extensive change has been introduced, it has been by persons before unconnected with the particular branch of manufacture; old customs and prejudices have such an effect on the mind, that it will be generally found that those before engaged in the particular manufacture are often the last to conform to an improvement in the means of production; and hence is the great difficulty which is found in making general any new invention. Had the case of Watt's steam engine been tried by the engineers of the day, such was their jealousy and prejudice, that it would inevitably have been thrown open to the public; even the great Smeaton, after having examined the engine, preferred, when constructing a large
work, to build an engine on the old plan, rather than use Watt’s engine, although the only payment demanded by the patentee for his engine, was a share of the profits made by saving a large quantity of fuel, which would be consumed by an engine of equal power on the old construction.

The manner of trying a patent right, according to the laws as they are at present constituted, will be found less objectionable than any of the projects for amending them; and it may be observed, that the same description of objections might be raised to every department of English Law, and the much and justly honoured trial by jury must be got rid of. The parties raising such objections forget that the duty of the jury is to give a verdict on the evidence brought before them, and under no circumstances are they required to know the law of the case; a jury might as well be expected to examine and understand the goodness of materials in an action brought on a contract for building a house, as that it is necessary that they should understand the value or goodness of a patented invention, from their own knowledge of the previous state of a particular manufacture. The evidence produced in a patent cause consists of scientific men and manufacturers, who are open to any question from the Counsel, who are aided
by scientific persons and manufacturers, and thus may be elicited and shewn to the jury any prejudice which a witness may entertain on the subject in question; by such means may twelve persons, before unacquainted with the matter, be able to come to a just verdict, which, in most instances, would not be the case if the scientific and manufacturing men were made judges, in place of witnesses. Such is the jealousy of individuals in every branch of manufactures and trades, that few persons would wish to have their works judged of and decided on by others engaged in the same branches of trade or manufactures. How much more, then, must this feeling apply to a patentee, more particularly when he has not been before engaged in the same branch of manufacture, and comes into the trade for the first time, armed with a grant securing an invention which produces a competing manufacture of a better quality, or at less cost. Few would expect justice to be done to a patentee, if those most interested in destroying the patent were made judges in place of witnesses. At present the duty of the judge is equally clear; nor does it require that he should possess more extensive scientific knowledge than falls to the share of those who are generally found on the bench. The judge has to give his opinion of the language of the spe-
cification, whether the same has complied with the provisos contained in the letters patent—as to whether the title given to the invention in the patent, and the claim of originality in the specification are in conformity with each other; and it will be for the jury to say, from the evidence, whether the invention is new and useful; whether an infringement has been proved; and also whether the invention may be performed, from the description given of it in the specification; consequently, evidence should always be given in support of the patent, by persons who, having read the specification, could make the invention from the specification without other aid. There may at all times arise questions where it will be for the jury to say whether or not, by the evidence, the specification is so clear as is required by law; when the evidence on that head is conflicting, the judge will leave such points to the jury to say whether or not the parties concerned have conformed to certain provisos.

There have also been objections raised to the manner of granting letters patent, more particularly that part which is the province of the Attorney and Solicitor-General: and, as a substitute, it has been recommended, that there should be a Board of Commissioners of scientific persons to examine inventions, to say whether
patents should be granted. There are so many objections to such a course of proceeding, that it may by some be thought unnecessary to enter into a refutation of such propositions; yet, as there should at all times be confidence in the power of the laws, that they are capable of giving to every one his equitable and just right, it follows, that any doubt raised as to the possibility of the laws having such power, must weaken that confidence which it is desirable every one should feel, otherwise parties would permit an injury in preference to submitting their claim to a tribunal whose power they doubt.

It will not, therefore, be considered out of place here to state, that the observations which have been made with respect to the appointment of a scientific commission for trying the validity of patent rights, apply, but with much greater force, to a similar commission being appointed to decide whether a patent should or should not be granted for any new invention. Such commissioners would be chosen from manufacturers, engineers, chemists, or individuals directly, or indirectly, concerned in constructing or working engines and machines and processes for producing the various manufactures, at present known: now, in case a patent should be applied for, it would follow that it might be for some new invention or discovery, by which a new
and cheaper means of producing a known manufacture would be brought about, or for a new manufacture, which, if brought fully into use might supersede some known manufacture. Should such a case come before a commission so constituted, it is evident there might and probably would be some one or more of the commission who would give an interested judgment, or be obliged to give an award, whereby a patent might be granted, and a monopoly given to some individual which would lead to the destruction of the profits of the trade or manufacture in which such commissioners were directly or indirectly interested. Besides which, there are often cases of patents applied for, where the inventions are so different from all others heretofore known that the commissioners would become incompetent to decide, and patents for important inventions would probably be refused. That of the means of lighting streets with gas might be instanced; had a patent been applied for some time prior to its first introduction for that purpose, it might have been refused by a commission so constituted; for, so great was the prejudice against the possibility of beneficially using gas for lighting streets, that the scientific world ridiculed the idea of such an application. Watt's engine may be again named, the prejudice was equally strong against its being capable of super-
seding the old fire-engines, as they were called. These, with many other instances which have occurred, and are constantly taking place, will be sufficient to show that a scientific commission is not the means of judging whether a patent should be granted. The expense, also, of a commission would be far greater than the whole sum paid for patents, of which sum upwards of two-thirds go into the public purse.

By the present practice it is impossible an inventor can be injured by a refusal to grant letters patent, from a supposition that he is mistaken as to the utility of his invention. The Queen, when petitioned, grants Her letters patent as a matter of course, and at the hazard of the petitioner, whether the invention be new and useful, and produce the desired effect. And it may be stated with confidence that under the present state of the law a person having made a new invention applicable to a manufacture, if he use reasonable care and caution in taking his patent and drawing his specification, may secure the same in such manner as to prevent any other person using the invention without his consent.
APPENDIX.

STATUTES.

18 Hen. VI. c. 1.

An Act that Letters Patent shall bear the date of the King's Warrant delivered into the Chancery.

First, Whereas by suit made to the King by divers persons, it hath been desired by their petitions to have offices, farms, and other things of the gift and grant of the King, by his gracious Letters Patents thereof to them to be made, desiring by the same petitions the same Letters Patents of the King to bear date at a certain day, limited in the same, the which day is often long before, the King's grant to them thereupon made have borne the same date, by reason whereof divers of the King's liege people, having such offices, farms, and other things, of the gift or grant of the King, by his gracious Letters Patents thereof to them long time before duly made by such subtil imagination of such antedates desired by such petitions of such offices, farms, and other things, often have been put out, amoved, and expelled, against right good conscience and reason. Our said Lord the King, willing to put out such imaginations by the advice and assent of the Lords spiritual and temporal aforesaid, and at the special request of the said Commons, hath ordained, by authority of the same Parliament, That of every warrant hereafter sent by the same, our Lord the King, or his heirs, to the Chancellor of England for the time being; the day of
APPENDIX.

the delivery of the same to the Chancellor shall be entered of record in the Chancery. And that the Chancellor do cause Letters Patents to be made upon the same warrant, bearing date the day of the said delivery in the Chancery, and not before in any wise. And if any Letters Patents be from henceforth made to the contrary, they shall be void, frustrate, and helden for none.

13 ELIZ. c. 6.

An Act that the Exemplification or Constat of Letters Patents shall be as good and available as the Letters Patents themselves.

For the avoiding of all such doubts, questions, and ambiguities, as heretofore have risen and been moved, and of such as hereafter might rise and be moved in and upon the Statute made in the Parliament begun and holden at Westminster the fourth day of November, in the third year of the reign of our late Sovereign Lord King Edward the Sixth, intituled, "An Act concerning grants and gifts made by Patentees out of Letters Patents, and for a due and full supply of all such wants as may be thought to be therein."

II. Be it enacted and declared by the authority of this present Parliament, That all and every patentee and patentees, their heirs, successors, executors, and assigns, and all and every other person and persons, having by or from them or any of them or under their title any estate or interest of, in, or to any lands, tenements, or hereditaments, or any other thing whatsoever to such patentee or patentees heretofore granted by any letters patents, either of the most famous Princes King Henry the Eighth, King Edward the
APPENDIX.

Sixth, Queen Mary, King Philip and Queen Mary, or by any of them, or by the Queen’s Most Excellent Majesty that now is, at any time sitethence the fourth day of February in the twenty-seventh year of the reign of the said late King Henry the Eighth, or else by the Queen’s Majesty that now is, her heirs or successors at any time hereafter to be granted, shall and may at all times hereafter, in any of the Queen’s Highness Courts, her heirs and successors, or elsewhere by the authority of this present Act, make and convey and be allowed and suffered to make and convey to and for him, them, and every of themselves, such claim or title by way of declarati

ration, plaint, avowry, bar, replication, or other pleading whatsoever, as well against the Queen’s Highness, her heirs and successors and every of them, as against all and every other person and persons whatsoever, for or concerning the lands, tenements, hereditaments, or other things whatsoever specified or contained in any such letters patents, or of, for, or concerning any part or parcel thereof, by showing forth an exemplification or constat under the Great Seal of England, or of the enrolment of the same letters patents or of so much thereof as shall and may serve to or for such title, claim or matter, the same letters patents then being and remaining in force, not lawfully surrendered nor cancelled for or concerning so much and such part and parcel of such lands, tenements, hereditaments, or other thing whereunto such title or claim shall be made, as if the same letters patents’ self were pleaded and showed forth, any law, usage, or other thing whatsoever to the contrary notwithstanding.

k 2
APPENDIX.

21 Jac. I. c. 3.

"Forasmuch as your Most Excellent Majesty, in your royal judgment, and of your blessed disposition to the weal and quiet of your subjects, did in the year of our Lord God one thousand six hundred and ten, publish in print to the whole realm, and to all posterity, that all grants of monopolies, and of the benefit of any penal laws, or of power to dispense with the law, or to compound for the forfeiture, are contrary to your Majesty's laws, which your Majesty's declaration is truly consonant and agreeable to the ancient and fundamental laws of this your realm: And whereas your Majesty was further graciously pleased expressly to command, that no suitor should presume to move your Majesty for matters of that nature; yet nevertheless upon misinformations and untrue pretences of public good, many such grants have been unduly obtained, and unlawfully put in execution, to the great grievance and inconvenience of your Majesty's subjects, contrary to the laws of this your realm, and contrary to your Majesty's most royal and blessed intention, so published as aforesaid:" For avoiding whereof, and preventing of the like in time to come, may it please your Excellent Majesty, at the humble suit of the Lords Spiritual and Temporal and the Commons, in this present Parliament assembled, That it may be declared and enacted: and be it declared and enacted, by authority of this present Parliament, That all monopolies, and all commissions, grants, licences, charters, and letters patents heretofore made or granted, or hereafter to be made or granted, to any person or persons, bodies politic or corporate whatsoever, of or for the sole buying, selling, making, working, or using of any thing within this realm, or the dominion of Wales, or of any other monopo-
APPENDIX.

lies, or of power, liberty, or faculty to dispense with any others, or to give licence or toleration to do, use, or exercise anything against the tenor or purport of any law or Statute: or to give or make any warrant for any such dispensation, licence, or toleration to be had or made; or to agree or compound with any others for any penalty or forfeitures limited by any Statute; or of any grant or promise of the benefit, profit or commodity of any forfeiture, penalty, or sum of money, that is or shall be due by any Statute, before judgment thereupon had: and all proclamations, instructions, restraints, warrants of assistance, and all other matters and things whatsoever, any way tending to the instituting, erecting, strengthening, furthering, or countenancing of the same or any of them; are altogether contrary to the laws of this realm, and so are and shall be utterly void and of none effect, and in no wise to be put in use or execution.

II. And be it further declared and enacted by the authority aforesaid, That all monopolies, and all such commissions, grants, licences, charters, letters patents, proclamations, inhibitions, restraints, warrants of assistance, and all other matters and things tending as aforesaid, and the force and validity of them, and of every of them, ought to be and shall be for ever hereafter examined, heard, tried, and determined, by and according to the common laws of this realm, and not otherwise.

III. And be it further enacted, by the authority aforesaid, That all person and persons, bodies politic and corporate whatsoever, which now are or hereafter shall be, shall stand and be disabled and uncapable to have, use, exercise, or put in use any monopoly, or any such commission, grant, licence, charter, letters patents, proclamation, inhibition, restraint, warrant of assistance, or other matter or thing tending as aforesaid, or any liberty, power, or faculty, grounded or pretended to be grounded upon them, or any of them.

Monopolies, &c., shall be tried by the common laws of this realm.

All persons disabled to use monopolies, &c.
APPENDIX.

IV. And be it further enacted, by the authority aforesaid, that if any person or persons at any time after the end of forty days next after the end of this present session of Parliament, shall be hindered, grieved, disturbed, or disquieted, or his or their goods or chattels any way seized, attached, distrained, taken, carried away or detained, by occasion or pretext of any monopoly, or of any such commission, grant, licence, power, liberty, faculty, letters patents, proclamation, inhibition, restraint, warrant of assistance, or other matter or thing tending as aforesaid, and will sue to be relieved in or for any of the premises; That then and in every such case, the same person and persons shall and may have his and their remedy for the same at the common law, by any action or actions to be grounded upon the Statute; the same action and actions to be heard and determined in the Courts of King's Bench, Common Pleas, and Exchequer, or in any of them, against him or them by whom he or they shall be so hindered, grieved, disturbed, or disquieted, or against him or them by whom his or their goods or chattels shall be so seized, attached, distrained, taken, carried away, or detained; wherein all and every such person and persons which shall be so hindered, grieved, disturbed, or disquieted, or whose goods or chattels shall be so seized, attached, distrained, taken, carried away, or detained, shall recover three times so much as the damages which he or they sustained by means or occasion of being so hindered, grieved, disturbed, or disquieted, or by means of having his or their goods or chattels seized, attached, distrained, taken, carried away, or detained, and double costs; and in such suits, or for the staying or delaying thereof, no ressoin, protection, wager of law, aid, prayer, privilege, injunction, or order of restraint, shall be in any wise prayed, granted, admitted, or allowed, nor any more than one imparlance: And if any person or persons shall, after notice given that the action depending is
grounded upon this Statute, cause or procure any action at the common law, grounded upon this Statute, to be stayed or delayed before judgment, by colour or means of any order, warrant, power, or authority, save only of the Court wherein such action as aforesaid shall be brought and depending, or after judgment had upon such action, shall cause or procure the execution of or upon any such judgment to be stayed or delayed by colour or means of any order, warrant, power, or authority, save only by writ of error or attainder; That then the said person and persons so offending shall incur and sustain the pains, penalties, and forfeitures ordained and provided by the Statute of Provision and Pre- munire made in the sixteenth year of the reign of King Richard the Second.

V. Provided nevertheless, and be it declared and enacted, That any declaration before mentioned shall not extend to any letters patents and grants of privilege for the term of one and twenty years or under, heretofore made, of the sole working or making of any manner of new manufacture within this realm, to the first and true inventor or inventors of such manufactures, which others at the time of the making of such letters patents and grants did not use, so they be not contrary to the law, nor mischievous to the State, by raising of the prices of commodities at home, or hurt of trade, or generally inconvenient, but that the same shall be of such force as they were or should be, if this Act had not been made, and of none other: and if the same were made for more than one and twenty years, that then the same for the term of one and twenty years only, to be accounted from the date of the first letters patents and grants thereof made, shall be of such force as they were or should have been, if the same had been made but for term of one and twenty years only, and as if this Act had never been had or made, and of none other.
APPENDIX.

VI. Provided also, and be it declared and enacted, "That any declaration before mentioned shall not extend to any letters patents and grants of privilege for the term of fourteen years or under, hereafter to be made, of the sole working or making of any manner of new manufactures within this realm, to the true and first inventor and inventors of such manufactures, which others, at the time of making such letters patents and grants, shall not use, so as also they be not contrary to the law, nor mischievous to the State, by raising prices of commodities at home, or hurt of trade, or generally inconvenient: the said fourteen years to be accounted from the date of the first letters patents, or grant of such privilege hereafter to be made, but that the same shall be of such force as they should be, if this Act had never been made, and of none other.

VII. [Not to extend to any Grants made by Parliament.]

VIII. [Nor to Warrants granted to Justices.]

IX. [Nor to Charters granted to Corporations.]

X. Provided also, and be it enacted, That this Act, or any declaration, provision, disablement, penalty, forfeiture, or other thing before mentioned, shall not extend to any letters patents or grants of privilege heretofore made, or hereafter to be made, of, for, or concerning printing, nor to any commission, grant, or letters patents, heretofore made, or hereafter to be made, of, for, or concerning the digging, making, or compounding of saltpetre or gunpowder, or the casting or making of ordnance, or shot for ordnance, nor to any grant or letters patents heretofore made, or hereafter to be made, of any office or offices heretofore erected, made, or ordained, and now in being, and put in execution, other than such offices as have been decried by any his Majesty's proclamation or proclamations: but that all and every the same grants, commissions, and letters patents, and all other matters and things tending to the maintaining, strengthening, and furtherance of the
APPENDIX.

same, or of any of them, shall be and remain of the like force and effect, and no other, and as free from the declarations, provisions, penalties, and forfeitures contained in this Act, as if this Act had never been had nor made, and not otherwise.

XI. Provided also, and be it enacted, That this Act, or any declaration, provision, disablement, penalty, forfeiture, or other thing before mentioned, shall not extend to any commission, grant, letters patents, or privilege, heretofore made, or hereafter to be made, of, for, or concerning the digging, compounding, or making of allum or allum mines, but that all and every the same commissions, grants, letters patents, and privileges, shall be and remain of the like force and effect, and no other, and as free from the declarations, provisions, penalties, and forfeitures contained in this Act, as if this Act had never been had nor made, and not otherwise.

XII. [Not to extend to the liberties of Newcastle-upon-Tyne, nor to licences of keeping taverns.]

XIII. [Nor to letters patents granted to Sir Robert Mansel, Kn., or to James Maxewell, Esq.]

XIV. [Nor to those granted to Abraham Baker, or Lord Dudley.]

5 & 6 Will. IV. c. 62.

An Act to repeal an Act of the present Session of Parliament, intituled, "An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the State, and to substitute Declarations in lieu thereof; and for the more entire Suppression of volun-
APPENDIX.

Tary and extra-judicial Oaths and Affidavits; and to make other Provisions for the Abolition of unnecessary Oaths.

Whereas an Act was passed in the present session of Parliament, intitled, "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the State, and to substitute declarations in lieu thereof; and for the more entire suppression of voluntary and extra-judicial oaths and affidavits;" and it was thereby enacted that the said Act should commence and take effect from and after the first day of June in this present year, the year of our Lord one thousand eight hundred and thirty-five, it not being intended that the said recited Act should take effect before the same received the Royal Assent: And whereas the said recited Act did not receive the Royal Assent till after the said first day of June, one thousand eight hundred and thirty-five: And whereas it was enacted by the said recited Act, that from and after the first day of June next ensuing, it should not be lawful for any Justice of the Peace to administer or receive such voluntary oaths as are therein mentioned, it being intended that the said prohibition should take effect from the time of the commencement of the said recited Act: And whereas it is expedient to amend the said Act, and to make some further provisions for the better effecting the object thereof, and to consolidate all the provisions relating thereto into one Act: Be it therefore enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, That from and after the passing of this Act the said recited Act shall be, and the same is, hereby repealed.

XI. And be it enacted, That whenever any person or
persons shall seek to obtain any patent under the great seal, for any discovery or invention, such person or persons shall, in lieu of any oath, affirmation, or affidavit which heretofore has or might be required to be taken or made upon or before obtaining any such patent, make and subscribe, in the presence of the person before whom he might, but for the passing of this Act, be required to take or make such oath, affirmation, or affidavit, a declaration to the same effect as such oath, affirmation, or affidavit; and such declaration, when duly made and subscribed, shall be to all intents and purposes as valid and effectual as the oath, affirmation, or affidavit in lieu whereof it shall have been so made and subscribed.

XIX. And be it enacted, That whenever any declaration shall be made and subscribed by any person or persons under or in pursuance of the provisions of this Act, or any of them, all and every such fees or fee as would have been due and payable on the taking or making any legal oath, solemn affirmation, or affidavit, shall be in like manner due and payable upon making and subscribing such declaration.

XX. And be it further enacted, That in all cases where a declaration in lieu of an oath shall have been substituted by this Act, or by virtue of any power or authority hereby given, or where a declaration is directed or authorized to be made and subscribed under the authority of this Act, or of any power hereby given, although the same be not substituted in lieu of an oath heretofore legally taken, such declaration, unless otherwise directed under the powers hereby given, shall be in the form prescribed in the schedule hereunto annexed.

XXI. And be it further enacted, That in any case where a declaration is substituted for an oath under the authority of this Act, or by virtue of any power or authority hereby given, or is directed and authorized to be made and sub-
scribed under the authority of this Act, or by virtue of any
power hereby given, any person who shall wilfully and cor-
ruptly make and subscribe any such declaration, knowing
the same to be untrue in any material particular, shall be
deemed guilty of a misdemeanor.

XXII. And be it enacted, That this Act shall commence
and take effect from and after the first day of *October*, in this
present year, the year of our Lord one thousand eight hun-
dred and thirty-five.

**SCHEDULE REFERRED TO BY THE FOREGOING ACT.**

I, A. B. do solemnly and sincerely declare, That
and I make this solemn declaration
conscientiously believing the same to be true, and by virtue
of the provisions of an Act made and passed in the
year of the reign of his present Majesty, intituled, “*An Act*”
*here insert the title of this Act*.

5 & 6 WILL. IV. c. 83.

*An Act to amend the Law touching Letters Patent for
Inventions.*

Whereas it is expedient to make certain additions to, and
alterations in the present law touching letters patent for in-
ventions, as well for the better protecting of patentees in
the rights intended to be secured by such letters patent, as
for the more ample benefit of the public from the same:
Be it enacted by the King’s Most Excellent Majesty, by and
with the advice and consent of the Lords Spiritual and Tem-
poral, and Commons, in this present Parliament assembled,
and by the authority of the same, That any person who, as
grantee, assignee, or otherwise, hath obtained, or who shall
hereafter obtain letters patent, for the sole making, exercising, vending, or using of any invention, may, if he think fit, enter with the Clerk of the Patents of England, Scotland, or Ireland, respectively, as the case may be, having first obtained the leave of his Majesty’s Attorney-general or Solicitor-general, in case of an English patent, of the Lord Advocate or Solicitor-general of Scotland in the case of a Scotch patent, or of his Majesty’s Attorney-general or Solicitor-general for Ireland in the case of an Irish patent, certified by his seal and signature, a disclaimer of any part of either the title of the invention or the specification, stating the reason for such disclaimer, or may, with such leave as aforesaid, enter a memorandum of any alteration in the said title or specification, not being such disclaimer or such alteration as shall extend the exclusive right granted by the said letters patent; and such disclaimer or memorandum of alteration, being filed by the said Clerk of the Patents, and enrolled with the specification, shall be deemed and taken to be part of such letters patent or such specification in all Courts whatever: Provided always, that any person may enter a Caveat, in like manner as Caveats are now used to be entered, against such disclaimer or alteration; which Caveat being so entered shall give the party entering the same a right to have notice of the application being heard by the Attorney-general or Solicitor-general, or Lord Advocate respectively: Provided also, that no such disclaimer or alteration shall be receivable in evidence in any action or suit (save and except in any proceeding by Seire facias) pending at the time when such disclaimer or alteration was enrolled, but in every such action or suit the original title and specification alone shall be given in evidence, and deemed and taken to be the title and specification of the invention for which the letters patent have been or shall have been granted: Provided also, that it shall be lawful for the
APPENDIX.

Attorney-general or Solicitor-general or Lord Advocate, before granting such fiat, to require the party applying for the same to advertise his disclaimer or alteration in such manner as to such Attorney-general or Solicitor-general or Lord Advocate shall seem right, and shall, if he so require such advertisement, certify in his fiat that the same has been duly made.

II. And be it enacted, That if in any suit or action it shall be proved or specially found by the verdict of a jury, that any person who shall have obtained letters patent for any invention or supposed invention, was not the first inventor thereof, or of some part thereof, by reason of some other person or persons having invented or used the same, or some part thereof, before the date of such letters patent, or if such patentee or his assigns shall discover that some other person had, unknown to such patentee, invented or used the same, or some part thereof, before the date of such letters patent, it shall and may be lawful for such patentee or his assigns to petition his Majesty in Council to confirm the said letters patent or to grant new letters patent, the matter of which petition shall be heard before the Judicial Committee of the Privy Council; and such Committee, upon examining the said matter, and being satisfied that such patentee believed himself to be the first and original inventor, and being satisfied that such invention, or part thereof, had not been publicly and generally used before the date of such first letters patent, may report to his Majesty their opinion that the prayer of such petition ought to be complied with, whereupon his Majesty may, if he think fit, grant such prayer; and the said letters patent shall be available in law and equity to give to such petitioner the sole right of using, making, and vending such invention as against all persons whatsoever, any law, usage, or custom to the contrary thereof notwithstanding: Provided, that any person opposing such petition shall be entitled to be heard before the said Judicial
Committee: Provided also, that any person, party to any former suit or action touching such first letters patent, shall be entitled to have notice of such petition, before presenting the same.

III. And be it enacted, That if any action at law, or any suit in equity for an account, shall be brought in respect of any alleged infringement of such letters patent heretofore or hereafter granted, or any Seire facias to repeal such letters patent, and if a verdict shall pass for the patentee or his assigns, or if a final decree or decretal order shall be made for him or them, upon the merits of the suit, it shall be lawful for the judge before whom such action shall be tried to certify on the record, or the judge who shall make such decree or order to give a certificate under his hand, that the validity of the patent came in question before him, which record or certificate being given in evidence in any other suit or action whatever touching such patent, if a verdict shall pass, or decree or decretal order be made, in favour of such patentee or his assigns, he or they shall receive treble costs in such suit or action, to be taxed at three times the taxed costs, unless the judge making such second or other decree or order, or trying such second or other action, shall certify that he ought not to have such treble costs.

IV. And be it further enacted, That if any person who now hath or shall hereafter obtain any letters patent as aforesaid shall advertise in the "London Gazette," three times, and in three London papers, and three times in some country paper published in the town where or near to which he carried on any manufacture of anything made according to his specification, or near to or in which he resides in case he carried on no such manufacture, or published in the County where he carries on such manufacture or where he lives in case there shall not be any paper published in such town, that he intends to apply to his Majesty in Council for

If in any action or suit a verdict or decree shall pass for the patentee, the judge may grant a certificate, which being given in evidence in any other suit shall entitle the patentee, upon a verdict in his favour, to receive treble costs.
a prolongation of his term of sole using and vending his
invention, and shall petition his Majesty in Council to that
effect, it shall be lawful for any person to enter a Caveat at
the Council office; and if his Majesty shall refer the con-
sideration of such petition to the Judicial Committee of the
Privy Council, and notice shall first be by him given to any
person or persons who shall have entered such Caveats, the
petitioner shall be heard by his Counsel and witnesses to
prove his case, and the persons entering Caveats shall like-
wise be heard by their Counsel and witnesses; whereupon,
and upon hearing and inquiring of the whole matter, the
Judicial Committee may report to his Majesty that a further
extension of the term in the said letters patent should be
granted, not exceeding seven years; and his Majesty is
hereby authorized and empowered, if he shall think fit, to
grant new letters patent for the said invention for a term
not exceeding seven years after the expiration of the first
term, any law, custom, or usage to the contrary in anywise
notwithstanding: Provided that no such extension shall be
granted if the application by petition shall not be made and
prosecuted with effect before the expiration of the term
originally granted in such letters patent.

V. And be it enacted, That in any action brought against
any person for infringing any letters patent the defendant on
pleading thereto shall give to the plaintiff, and in any Seire
facias to repeal such letters patent the plaintiff shall file with
his declaration, a notice of any objections on which he
means to rely at the trial of such action, and no objection
shall be allowed to be made in behalf of such defendant or
plaintiff respectively at such trial unless he prove the
objections stated in such notice: Provided always, that it
shall and may be lawful for any judge at chambers, on
summons served by such defendant or plaintiff on such
plaintiff or defendant respectively to show cause why he
should not be allowed to offer other objections whereof notice shall not have been given as aforesaid, to give leave to offer such objections, on such terms as to such Judge shall seem fit.

VI. And be it enacted, That in any action brought for infringing the right granted by any letters patent, in taxing the costs thereof regard shall be had to the part of such case which has been proved at the trial, which shall be certified by the Judge before whom the same shall be had, and the costs of each part of the case shall be given according as either party has succeeded or failed therein, regard being had to the notice of objections, as well as the counts in the declaration, and without regard to the general result of the trial.

VII. And be it enacted, That if any person shall write, paint, or print, or mould, cast, or carve, or engrave or stamp, upon any thing made, used, or sold by him, for the sole making or selling of which he hath not or shall not have obtained letters patent, the name or any imitation of the name of any other person who hath or shall have obtained letters patent for the sole making and vending of such thing, without leave in writing of such patentee or his assigns, or if any person shall upon such thing, not having been purchased from the patentee or some person who purchased it from or under such patentee, or not having had the licence or consent in writing of such patentee or his assigns, write, paint, print, mould, cast, carve, engrave, stamp, or otherwise mark the word “Patent,” the words “Letters Patent,” or the words “By the King’s Patent,” or any words of the like kind, meaning, or import, with a view of imitating or counterfeiting the stamp, mark, or other device of the patentee, or shall in any other manner imitate or counterfeit the stamp or mark or other device of the patentee, he shall for every such offence be liable to a penalty of fifty
pounds, to be recovered by action of debt, bill, plaint, process, or information in any of his Majesty's Courts of Record at Westminster or in Ireland, or in the Court of Session in Scotland, one half to his Majesty, his heirs and successors, and the other to any person who shall sue for the same: Provided always, that nothing herein contained shall be construed to extend to subject any person to any penalty in respect of stamping or in any way marking the word "Patent" upon anything made, for the sole making or vending of which a patent before obtained shall have expired.

---

2 & 3 Victoria, c. 67.

An Act to amend an Act of the Fifth and Sixth Years of the Reign of King William the Fourth, intituled "An Act to amend the Law touching Letters Patent for Inventions."

Whereas by an Act passed in the fifth and sixth years of the reign of his Majesty King William the Fourth, intituled 5 & 6 W. 4. c. 83. "An Act to amend the Law touching Letters Patent for Inventions," it is amongst other things enacted, that if any person having obtained any letters patent as therein mentioned shall give notice as thereby required of his intention to apply to his Majesty in Council for a prolongation of his term of sole using and vending his invention, and shall petition His Majesty in Council to that effect, it shall be lawful for any person to enter a Caveat at the Council office, and if his Majesty shall refer the consideration of such petition to the Judicial Committee of the Privy Council, and notice shall be first given to any person or persons who shall
have entered such Caveats, the petitioner shall be heard by his Counsel and witnesses to prove his case, and the persons entering Caveats shall likewise be heard by their Counsel and witnesses, whereupon, and upon hearing and inquiry of the whole matter, the Judicial Committee may report to his Majesty that a further extension of the term in the said letters patent shall be granted, not exceeding seven years, and his Majesty is thereby authorized and empowered, if he shall think fit, to grant new letters patent for the said invention for a term not exceeding seven years after the expiration of the first term, any law, custom, or usage to the contrary notwithstanding; provided that no such extension shall be granted if the application by petition shall not be made and prosecuted with effect before the expiration of the term originally granted in such letters patent: And whereas it has happened since the passing of the said Act, and may again happen, that parties desirous of obtaining an extension of the term granted in letters patent of which they are possessed, and who may have presented a petition for such purposes in manner by the said recited Act directed, before the expiration of the said term, may nevertheless be prevented by causes over which they have no control from prosecuting with effect their application before the Judicial Committee of the Privy Council; and it is expedient therefore that the said Judicial Committee should have power, when under the circumstances of the case they shall see fit, to entertain such application, and to report thereon, according to the provisions of the said recited Act, notwithstanding that before the hearing of the case before them the terms of the letters patent sought to be renewed or extended may have expired: Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the
with effect before the expiration of the term of the patent.

Term of patent right may be extended in certain cases though the application for such extension be not prosecuted with effect before the expiration thereof.

same. That so much of the said recited Act as provides that no extension of the term of letters patent shall be granted as therein mentioned if the application by petition for such extension be not prosecuted with effect before the expiration of the term originally granted in such letters patent, shall be and the same is hereby repealed.

II. And be it further enacted, That it shall be lawful for the Judicial Committee of the Privy Council, in all cases where it shall appear to them that any application for an extension of the term granted by any letters patent, the petition for which extension shall have been referred to them for their consideration, has not been prosecuted with effect before the expiration of the said term from any other causes than the neglect or default of the petitioner, to entertain such application, and to report thereon as by the said recited Act provided, notwithstanding the term originally granted in such letters patent may have expired before the hearing of such application; and it shall be lawful for Her Majesty, if she shall think fit, on the report of the said Judicial Committee recommending an extension of the term of such letters patent, to grant such extension, or to grant new letters patent for the invention or inventions specified in such original letters patent, for a term not exceeding seven years after the expiration of the term mentioned in the said original letters patent: Provided always, that no such extension or new letters patent shall be granted if a petition for the same shall not have been presented as by the said recited Act directed before the expiration of the term sought to be extended, nor in case of petitions presented after the thirtieth day of November, one thousand eight hundred and thirty-nine, unless such petition shall be presented six calendar months at the least before the expiration of such term, nor in any case unless sufficient reason shall be shown to the satisfaction of the said Judicial Com-
APPENDIX.

mittee for the omission to prosecute with effect the said application by petition before the expiration of the said term.

3 & 4 VICTORIA, c. 24.

WHEREAS an Act passed in the forty-third year of the reign of Queen Elizabeth, intituled "An Act to avoid trifling and frivolous Suits in Law in Her Majesty's Courts in Westminster," and another Act in the Twenty-second and Twenty-third Years of the Reign of King Charles the Second, intituled "An Act for laying Impositions on Proceedings at Law," which recites that many good subjects of this realm have been and daily are undone by such suits, contrary to the intention of the said Statute of Queen Elizabeth; but the same evil, notwithstanding, doth still prevail and increase, and it is expedient to make further provisions for the prevention thereof: Now be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that the said recited Act of the Forty-third of Elizabeth, so far as it relates to costs in actions of trespass, or trespass on the case, and so much of the Twenty-second

Recited Acts in part repealed.
and Twenty-third of Charles the Second as relates to costs in personal actions, be and they are hereby repealed.

II. And be it enacted, That if the plaintiff in any action of trespass, or of trespass on the case, brought or to be brought in any of Her Majesty's Courts at Westminster, or in the Court of Common Pleas at Lancaster, or in the Court of Common Pleas at Durham, shall recover by the verdict of a Jury less damages than forty shillings, such plaintiff shall not be entitled to recover or obtain from the defendant, in respect of such verdict, any costs whatever, whether it shall be given upon any issue or issues tried, or judgment shall have passed by default, unless the Judge or presiding officer before whom such verdict shall be obtained, shall immediately afterwards certify on the back of the record, or on the writ of trial or writ of inquiry, that the action was really brought to try a right besides the mere right to recover damages for the trespass or grievance for which the action shall have been brought, or that the trespass or grievance in respect of which the action was brought was wilful and malicious.

5 & 6 Victoria, c. 97.

WHEREAS divers Acts of Parliament, public, local, and personal, contain enactments or provisions relating to the recovery of double, treble, or other costs in certain cases, and to the pleading of the general issue and the giving any special matter in evidence at any trial to be had for any
APPENDIX.

matter done in pursuance of or under the authority of the said Acts, and to the giving of notice of action before any action shall be commenced: And whereas it is expedient that the law should be altered in such respects: Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, That so much of any clause, enactment, or provision in any Act or Acts commonly called public local and personal, or local and personal, or in any Act or Acts of a local or personal nature, whereby it is enacted or provided that either double or treble costs, or any other than the usual costs between party and party, shall or may be recovered, shall be, and the same are hereby repealed: Provided always, that in lieu thereof the usual costs between party and party shall and may be recovered, and no more.

II. And be it enacted, That so much of any clause, enactment, or provision in any public Act or Acts, not local or personal, whereby it is enacted or provided that either double or treble costs, or any other than the usual costs between party and party, shall or may be recovered, shall be, and the same are hereby repealed: Provided always, that instead of such costs, the party or parties heretofore entitled under such last-mentioned Acts to such double, treble, or other costs, shall receive such full and reasonable indemnity as to all costs, charges, and expenses incurred in and about any action, suit, or other legal proceeding, as shall be taxed by the proper officer in that behalf, subject to be reviewed in like manner and by the same authority as any other taxation of costs by such officer.

VI. Provided always, and be it enacted, That nothing herein contained shall extend or be construed to extend to any action, bill, plaint, or information, or any legal pro-

Act not to extend to actions, &c., brought before passing of this Act.

Repeal of provision in local and personal Acts giving double and treble costs.

Repealing provision in public Acts giving double and treble costs.
ceeding of any kind whatsoever, commenced before the passing of this Act, but such proceedings may be thereupon had and taken in all respects as if this Act had not passed.

7 & 8 Victoria, c. 69.

An Act for amending an Act passed in the Fourth Year of the Reign of His late Majesty, intituled, “An Act for the better Administration of Justice in His Majesty's Privy Council; and to extend its Jurisdiction and Powers.”

Whereas the Act passed in the fourth year of the reign of His late Majesty, intituled, “An Act for the better Administration of Justice in His Majesty's Privy Council,” hath been found beneficial to the due administration of justice: and whereas another Act, passed in the sixth year of the said reign, intituled, “An Act to amend the Law touching Letters Patent for Inventions,” hath been also found advantageous to inventors and to the public: And whereas the Judicial Committee, acting under the authority of the said Acts, hath been found to answer well the purposes for which it was so established by Parliament, but it is found necessary to improve its proceedings in some respects, for the better despatch of business, and expedient also to extend its jurisdiction and powers: And whereas by the laws now in force in certain of Her Majesty's Colonies and possessions abroad, no appeals can be brought to Her Majesty in Council for the reversal of the judgments, sentences, decrees, and orders of any Courts of Justice within such Colonies, save only of the Courts of Error or Courts of Appeal within the same, and it is expedient that Her
Majesty in Council should be authorized to provide for the admission of appeals from other Courts of Justice within such Colonies or possessions: Be it therefore enacted, &c. &c.

II. And whereas it is expedient, for the further encouragement of inventions in the useful arts, to enable the time of monopoly in patents to be extended in cases in which it can be satisfactorily shown that the expense of the invention hath been greater than the time now limited by law will suffice to reimburse; be it enacted, That if any person, having obtained a patent for any invention, shall, before the expiration thereof, present a petition to Her Majesty in Council, setting forth that he has been unable to obtain a due remuneration for his expense and labour in perfecting such invention, and that an exclusive right of using and vending the same for the further period of seven years, in addition to the term in such patent mentioned, will not suffice for his reimbursement and remuneration, then, if the matter of such petition shall be by Her Majesty referred to the Judicial Committee of the Privy Council, the said Committee shall proceed to consider the same after the manner and in the usual course of its proceedings touching patents, and if the said Committee shall be of opinion, and shall so report to Her Majesty, that a further period, greater than seven years extension of the said patent term, ought to be granted to the petitioner, it shall be lawful for Her Majesty, if she shall so think fit, to grant an extension thereof for any time not exceeding fourteen years, in like manner, and subject to the same rules as the extension for a term not exceeding seven years is now granted under the powers of the said Act of the sixth year of the reign of His late Majesty.

III. Provided always, and be it enacted, That nothing herein contained shall prevent the said Judicial Committee...
from reporting that an extension for any period not exceeding seven years should be granted, or prevent Her Majesty from granting an extension for such lesser term than the Petition shall have prayed.

IV. And whereas doubts have arisen touching the power given by the said recited Act of the sixth year of the reign of His late Majesty in cases where the patentees have wholly or in part assigned their right; be it enacted, That it shall be lawful for Her Majesty, on the Report of the Judicial Committee, to grant such extension as is authorized by the said Act and by this Act, either to an assignee or assignees, or to the original patentee or patentees, or to an assignee or assignees and original patentee or patentees conjointly.

V. And be it enacted, That in case the original patentee or patentees hath or have departed with his or their whole or any part of his or their interest by assignment to any other person or persons, it shall be lawful for such patentee, together with such assignee or assignees, if part only hath been assigned, and for the assignee or assignees, if the whole hath been assigned, to enter a disclaimer and memorandum of alteration under the powers of the said recited Act; and such disclaimer and memorandum of such alteration, having been so entered and filed as in the said recited Act mentioned, shall be valid and effectual in favour of any person or persons in whom the rights under the said letters patent may then be or thereafter become legally vested; and no objection shall be made in any proceeding whatsoever on the ground that the party making such disclaimer or memorandum of such alteration had not sufficient authority in that behalf.

VI. And be it enacted, That any disclaimer or memorandum of alteration before the passing of this Act, or by virtue of the said recited Act, by such patentee with such assignee
or by such assignee as aforesaid, shall be valid and effectual to bind any person or persons in whom the said letters patent might then be or have since become vested; and no objection shall be made in any proceeding whatsoever that the party making such disclaimer or memorandum of alteration had not authority in that behalf.

VII. And be it enacted, That any new letters patent which before the passing of this Act may have been granted, under the provisions of the above-recited Act of the sixth year of the reign of His late Majesty, to an assignee or assignees, shall be as valid and effectual as if the said letters patent had been made after the passing of this Act, and the title of any party to such new letters patent shall not be invalidated by reason of the same having been granted to an assignee or assignees: Provided always, that nothing herein contained shall give any validity or effect to any letters patent heretofore granted to any assignee or assignees where any action or proceeding in Seire facias or suit in equity shall have been commenced at any time before the passing of this Act, wherein the validity of such letters patent shall have been or may be questioned.

Form of Declaration to be made on petitioning for a Patent.

I, A.B. of (profession) do solemnly and sincerely declare that I have invented *

that I am the first and true inventor † thereof, and that the

---

Form of Notice of an Application for a Patent to those who have entered Caveats.

4, Old Square, Lincoln's Inn, 1846.

SIR,

I beg to inform you that A. B. of in the County of , is applying for a patent for [here the title of the invention is inserted.]

Should you consider that the above will interfere with your Caveat, an answer, post-paid, is requested within seven days from the date hereof, otherwise the patent will proceed.

We are your obedient servants,

POOLE & CARPMAEL.

---

Form of Report of the Attorney or Solicitor-General.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

In humble obedience to your Majesty's command, signified to me by the Right Honourable , one of your Majesty's Principal Secretaries of State, referring to me the petition of A. B. of , to consider thereof, and report my opinion
what might be properly done therein, which petition sets forth that the said petitioner hath invented [here insert the title of invention], that he is the first and true inventor thereof, and that the same hath never been practised by any other person whomsoever, to his knowledge or belief.

The petitioner, therefore, most humbly prays that your Majesty will be graciously pleased to grant unto him, his executors, administrators, and assigns, your royal letters patent under the Great Seal of Great Britain, for the sole use, benefit, and advantage of his said invention, within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in your Majesty's Colonies and Plantations abroad,* for the term of fourteen years, pursuant to the Statute in that case made and provided.

I humbly beg leave to certify unto your Majesty, that in support of the allegations contained in the said petition, a declaration of the said petitioner hath been laid before me, verifying the truth of the said petition.

Upon consideration whereof, and as it is entirely at the hazard of the said petitioner whether the said invention is new or will have the desired success, and as it may be reasonable for your Majesty to encourage all arts and inventions which may be for the public good, I am humbly of opinion that your Majesty may, by your Royal letters patent under the Great Seal of Great Britain, grant to the said petitioner, his executors, administrators, and assigns, the sole use, benefit, and advantage of his said invention within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all your Majesty's Colonies and Plantations abroad, for the term of fourteen years, pursuant to the

* The words in italics are omitted when the patent is not to extend to those places.
Statute in that case made and provided, if your Majesty should be graciously pleased so to do, with the usual proviso, requiring the said petitioner within the space of calendar months, to be computed from the day of the date of such letters patent, to cause a particular description of the nature of his said invention, and in what manner the same is to be performed, by writing under his hand and seal, to be enrolled in your Majesty's High Court of Chancery, otherwise the said letters patent to be void.

All which I humbly submit to your Majesty's Royal wisdom.

Temple, 1846.

Signed by the Attorney or Solicitor-General.

Form of the Queen's Warrant.

VICTORIA R.

Whereas A. B., of , in the County of , hath by his petition humbly represented unto us, that he hath invented [here insert title of invention], that he is the first and true inventor thereof, and that the said invention hath never been practised or used by any other person or persons whomsoever, to his knowledge or belief. The petitioner, therefore, most humbly prays that We will be graciously pleased to grant unto him, his executors, administrators, and assigns, Our Royal letters patent, for the sole use, benefit, and advantage of his said invention, within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all our Colonies and Planta-
tions abroad,* for the term of fourteen years, pursuant to
the Statute in that case made and provided.

We, being willing to give encouragement to all arts and
inventions which may be for the public good, are graciously
pleased to condescend to the petitioner's request. Our will
and pleasure, therefore, is, that you prepare a Bill for Our
Royal signature, to pass Our Great Seal of Our United
Kingdom of Great Britain and Ireland, containing Our grant
unto him the said A. B., his executors, administrators, and
assigns, of the sole use, benefit, and advantage of said inven-
tion, within that part of Great Britain called England,
Our dominion of Wales, and town of Berwick-upon-Tweed,
and in the Islands of Guernsey, Jersey, Alderney, Sark,
and Man, and also in all Our Colonies and Plantations
abroad, for the term of fourteen years, pursuant to the
Statute in that case made and provided; Provided that the
petitioner does within the space of calendar months,
to be computed from the date of Our said intended grant,
cause a particular description of the nature of his said inven-
tion, and in what manner the same is to be performed,
by writing under his hand and seal, to be enrolled in Our
High Court of Chancery, otherwise Our said intended
letters patent to be void; And you are to insert in the said
Bill a clause containing some proviso requiring the said
A. B., or the person or persons enjoying the benefit thereof,
to supply Our service with the invention, at such reasonable
price as shall be fixed, in some mode to be prescribed in Our
said letters patent, which, on the one hand, may secure the
benefit of the invention for Our service upon reasonable
terms, and, on the other hand, may secure to the petitioner,
his executors and assigns, a liberal compensation for such
benefit. And all such clauses, prohibitions, and provisos, as

* The words in italics are left out when the patent does not extend to
those places.
are usual and necessary in Grants of the like nature, and as you shall judge requisite; and for so doing, this shall be your Warrant. Given at Our Court at St. James's, the day of 1846, in the year of Our reign.

By Her Majesty's command.

To our Attorney or Solicitor-General.  
{ Countersigned by the Secretary of State for the Home Department.

Form of Letters Patent.

(No. 1.)—Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, To all to whom these presents shall come, greeting: Whereas A. B., of , in the County of , hath, by his petition humbly represented unto us, that he has invented [here the title is inserted], that he is the first and true inventor thereof, and that the said invention hath never been practised or used by any other person or persons whomsoever, to his knowledge or belief; the petitioner, therefore, most humbly prayed that We would be graciously pleased to grant unto him, his executors, administrators, and assigns, Our Royal letters patent, for the sole use, benefit, and advantage of his said invention, within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all Our Colonies and Plantations abroad,* for the term of fourteen years, pursuant to the Statute in that case made and provided: and We being willing to give encouragement to all arts and inventions

* The words in italics are left out when the patent does not extend to those places.
which may be for the public good, are graciously pleased to condescend to the petitioner's request.

(No. 2.)—KNOW YE, therefore, that We, of Our especial grace, certain knowledge, and mere motion, have given and granted, and by these presents, for us, Our heirs and successors, do give and grant unto the said A. B., his executors, administrators, and assigns, Our especial licence, full power, sole privilege and authority, that he, the said A. B., his executors, administrators, and assigns, and every of them, by himself and themselves, or by his and their deputy or deputies, servants or agents, or such others as he the said A. B., his executors, administrators, or assigns shall at any time agree with, and no others, from time to time, and at all times hereafter, during the term of years herein expressed, shall, and lawfully may, make, use, exercise, and vend his said invention within that part of Our United Kingdom of Great Britain and Ireland, called England, Our dominion of Wales, and town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all Our Colonies and Plantations abroad, in such manner as to him the said A. B., his executors, administrators, and assigns, or any of them, shall in his or their discretions seem meet; and that he, the said A. B., his executors, administrators, and assigns, shall and lawfully may have and enjoy the whole profit, benefit, commodity, and advantage, from time to time coming, growing, accruing, and arising by reason of the said invention, for and during the term of years herein mentioned, To have, hold, exercise, and enjoy the said licence, powers, privileges, and advantages, hereinbefore granted or mentioned, to be granted unto the said A. B., his executors, administrators, and assigns, for and during, and unto the full end and term of fourteen years from the date of these presents, next and immediately ensuing, and fully to be complete and ended.
according to the Statute in such case made and provided; And to the end that he the said A. B., his executors, administrators, and assigns, and every of them, may have and enjoy the full benefit and the sole use and exercise of the said invention, according to Our gracious intention herein-before declared: We do by these presents, for us, Our heirs and successors, require and strictly command all and every person and persons, Bodies Politic and Corporate, and all other Our subjects whatsoever, of what estate, quality, degree, name, or condition soever they be, within that said part of Our United Kingdom of Great Britain and Ireland called England, Our dominion of Wales, and town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all Our Colonies and Plantations abroad aforesaid, That neither they, or any of them, at any time during the continuance of the said term of fourteen years hereby granted, either directly or indirectly do make, use, or put in practice the said invention, or any part of the same, so attained unto by the said A. B. as aforesaid, nor in anywise counterfeit, imitate, or resemble the same, nor shall make, or cause to be made, any addition thereunto, or subtraction from the same, whereby to pretend himself or themselves the inventor or inventors, devisor or devisors thereof, without the licence, consent, or agreement of the said A. B., his executors, administrators, or assigns, in writing, under his or their hands and seals first had and obtained in that behalf, upon such pains and penalties as can or may be justly inflicted on such offenders for their contempt of this Our Royal Command; And further, to be answerable to the said A. B., his executors, administrators, and assigns, according to law, for his and their damages thereby occasioned. And, moreover, We do by these presents, for us, Our heirs and successors, will and command all and singular the Justices of the Peace, Mayors, Sheriffs,
Bailiffs, Constables, Headboroughs, and all other Officers and Ministers whatsoever, of us, Our heirs and successors for the time being, that they or any of them do not, nor shall at any time during the said term hereby granted, in any wise molest, trouble, or hinder the said A. B., his executors, administrators, or assigns, or any of them, or his or their deputies, servants, or agents, in or about the due and lawful use or exercise of the aforesaid invention, or any thing relating thereto.

(No. 3.)—Provided always, and these Our letters patent are and shall be upon this condition, that if at any time during the said term hereby granted, it shall be made appear to us, Our heirs or successors, or any six or more of Our or their Privy Council, that this Our grant is contrary to law, or prejudicial or inconvenient to Our subjects in general, or that the said invention is not a new invention as to the public use and exercise thereof in that said part of Our United Kingdom of Great Britain and Ireland, called England, Our dominion of Wales, and town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all Our Colonies and Plantations abroad aforesaid, or not invented and found out* by the said A. B. as aforesaid, then, upon signification or declaration thereof to be made by us, Our heirs or successors, under Our or their Signet, or Privy Seal, or by the Lords and others of Our or their Privy Council, or any six or more of them, under their hands, these Our letters patent shall forthwith cease, determine, and be utterly void, to all intents and purposes, anything hereinbefore contained to the contrary thereof in anywise notwithstanding.

(No. 4.)—Provided also, that these Our letters patent, or anything herein contained, shall not extend, or be construed

* In case it be for an invention communicated from abroad, then the patent is as follows:—"or not first introduced therein by the said," &c.
to extend, to give privilege unto the said A. B., his executors, administrators, or assigns, or any of them, to use or imitate any invention or work whatsoever, which hath heretofore been found out or invented by any other of Our subjects whatsoever, and publicly used or exercised in that said part of Our United Kingdom of Great Britain and Ireland called England, Our dominion of Wales, or town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, or in any of Our Colonies and Plantations abroad aforesaid, unto whom like letters patent or privileges have been already granted, for the sole use, exercise, and benefit thereof; it being Our will and pleasure that the said A. B., his executors, administrators, and assigns, and all and every other person and persons to whom like letters patent or privileges have been already granted as aforesaid, shall distinctly use and practise their several inventions by them invented and found out, according to the true intent and meaning of the same respective letters patent, and of these presents.

(No. 5.)—Provided likewise, nevertheless, and these Our letters patent are upon this express condition, that if at any time hereafter these Our letters patent, or the liberties and privileges hereby by us granted, shall become vested in, or in trust for, more than the number of twelve persons,* or their representatives, at any one time, as partners dividing or entitled to divide the benefit or profits obtained by reason of these Our letters patent (reckoning executors or administrators as and for the single person whom they represent as to such interest

* There have been Acts of Parliament granted for extending the number of persons interested in a patent right; the clause being meant generally to prevent corporate bodies having an exclusive monopoly of any branch of manufacture, but does not preclude the patentee licensing any number of persons to make, use, and sell the invention, so long as the right of patent remains vested in the patentee, or his assigns, not exceeding the number of twelve.
as they are or shall be entitled to in right of such their testator or intestate).

(No. 6.)—And also, if the said A. B. shall not particularly describe and ascertain the nature of the said invention, and in what manner the same is to be performed, by an instrument in writing under his hand and seal, and cause the same to be enrolled in Our High Court of Chancery, within calendar months next and immediately after the date of these Our letters patent; And also if the said A. B., his executors, administrators, or assigns, shall not supply or cause to be supplied for Our service, all such articles of the said invention as he or they shall be required to supply by the Officers or Commissioners administering the department of Our service, for the use of which the same shall be required in such manner, at such times, and at and upon such reasonable prices and terms as shall be settled for that purpose by the said Officers or Commissioners so requiring the same, that then these Our letters patent, and all liberties and advantages whatsoever hereby granted, shall utterly cease, determine, and become void, anything hereinbefore contained to the contrary thereof in anywise notwithstanding. Provided that nothing herein contained shall prevent the granting of licenses in such manner and for such considerations as they may by law be granted.

(No. 7.)—And lastly, We do, by these presents, for us, Our heirs and successors, grant unto the said A. B., his executors, administrators, and assigns, that these Our letters patent, or the Enrolment or Exemplification thereof, shall be in and by all things good, firm, valid, sufficient, and effectual in the law, according to the true intent and meaning thereof, and shall be taken, construed, and adjudged in the most favourable and beneficial sense, for the best advantage of the said A. B., his executors, administrators, and assigns, as well in all Our Courts of Record as
elsewhere, and by all and singular the Officers and Ministers whatsoever of us, Our heirs and successors, in that part of Our said United Kingdom of Great Britain and Ireland called England, Our dominion of Wales, and town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and in all Our Colonies and Plantations abroad aforesaid, and amongst all and every the subjects of us, Our heirs and successors whatsoever and wheresoever, notwithstanding the not full and certain describing the nature or quality of the said invention, or of the materials thereto conducing and belonging.

In witness whereof, We have caused these Our letters to be made patent. Witness Ourself at Our Palace at Westminster, this day of , in the year of our reign.

By Writ of Privy Seal.

Form of Specification.

To all to whom these presents shall come, I, A. B., of , in the County of , Send Greeting. Whereas Her present most Excellent Majesty, Queen Victoria, by Her Royal letters patent, under the Great Seal of the United Kingdom of Great Britain and Ireland,* bearing date at Westminster, the day of , in the year of her reign, did for herself, her heirs and successors, give and grant unto me, the said A. B., my executors, administrators, and assigns, her especial licence, full power, sole privilege and authority, that I, the said A. B., my executors, adminis-

* The Great Seal of Great Britain was destroyed after the Union with Ireland; but there is no legal objection to the words Great Britain only.—See The King v. Bullock, Taunt. Rep. 71.
APPENDIX.

trators, and assigns, or such others as I, the said A. B., my executors, administrators, and assigns, should at any time agree with, and no others, from time to time and at all times during the term of years therein expressed, should and lawfully might make, use, exercise, and vend, within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all Her said Majesty's Colonies and Plantations abroad,* my invention of [here the title set forth in the letters patent is inserted verbatim]. In which said letters patent there is contained a proviso that I, the said A. B., shall cause a particular description of the nature of my said invention, and in what manner the same is to be performed, by an instrument in writing under my hand and seal, to be enrolled in Her said Majesty's High Court of Chancery, within† calendar months next and immediately after the date of the said in part recited letters patent, as in and by the same, reference being thereunto had, will more fully and at large appear.

Now know ye, that in compliance with the said proviso, I, the said A. B., do hereby declare, that the nature of my invention, and the manner in which the same is to be performed, are particularly described and ascertained in and by the following statement thereof, reference being had to the drawings hereunto annexed, and to the figures and letters marked thereon;‡ that is to say, my invention consists [here insert description of the invention]. In witness

* The words in italics are omitted when the patent does not extend to the Colonies and Islands.
† A specification is duly enrolled if it be lodged in the Inrolment Office, any time before twelve o'clock, P.M., of the day on which the number of months expire.
‡ The words in italics are omitted when drawings are not used to aid the description.
APPENDIX.

whereof, I, the said A. B., have hereunto set my hand and seal, this day of  

A. B. (seal).

Taken and acknowledged by  
A. B., party hereto, at  
this day of  
1846,

Before me—  

A Master in Chancery.†

Rules to be observed in Proceedings before the Judicial Committee of the Privy Council, under the Act of the 5th and 6th Wm. IV. c. 83, entitled “An Act to amend the Law touching Letters Patent for Inventions.”

1. A party intending to apply by petition under section

* In the event of the patent being taken by two or more inventors, the acknowledgment and signature of one only will be sufficient.  
† Or, a Master Extraordinary in Chancery.
2, of the said Act,* shall give public notice, by advertising in the "London Gazette," three times, and in three London newspapers, and three times in some county paper published in the town where, or near to which, he carries on any manufacture of anything made according to his specification, or near to or in which he resides, in case he carries on no such manufacture, or published in the county where he carries on such manufacture, or where he lives, in case there shall not be any paper published in such town, that he intends to petition his Majesty under the said section, and shall in such advertisements state the object of such petition; and give notice of the day on which he intends to apply for a time to be fixed for hearing the matter of his petition (which day shall not be less than four weeks from the date of the publication of the last of the advertisements to be inserted in the London Gazette), and that on or before such day notice must be given of any opposition intended to be made to the petition, and any person intending to oppose the said application shall lodge notice to that effect at the Council-office on or before such day so named in the said advertisements, and having lodged such notice, shall be entitled to have from the petitioner four weeks' notice of the time appointed for the hearing.

2. A party intending to apply by petition under section 4, of the said Act, shall, in the advertisements directed to be published by the said section, give notice of the day on which he intends to apply for a time to be fixed for hearing the matter of his petition (which day shall not be less than four weeks from the date of the publication of the last of the advertisements to be inserted in the London Gazette), and that on or before such day Caveats must be entered; and

* The petition must be presented at least six months before the expiration of the letters patent; but the Privy Council have refused to hear a petition, in respect to a patent having several years unexpired.
any person intending to enter a Caveat shall enter the same at the Council-office on or before such day so named in the said advertisements; and, having entered such Caveat, shall be entitled to have from the petitioner four weeks' notice of the time appointed for the hearing.

3. Petitions under sections 2, and 4, of the said Act must be presented within one week from the insertion of the last of the advertisements required to be published in the London Gazette.

4. All petitions must be accompanied with affidavits of advertisements having been inserted according to the provisions of section 4, of the said Act, and the 1st and 2d of these rules, and the matters in such affidavits may be disputed by the parties opposing, upon the hearing of the petitions.

5. All persons entering Caveats under section 4, of the said Act, and all parties to any former suit or action, touching letters patent, in respect of which petition shall have been presented under section 2, of the said Act, and all persons lodging notices of opposition under the first of these rules shall respectively be entitled to be served with copies of petitions presented under the said sections, and no application to fix a time for hearing shall be made without affidavit of such service.

6. All parties served with petitions shall lodge at the Council-office, within a fortnight after such service, notice of the grounds of their objections to the granting of the prayers of such petitions.

7. Parties may have copies of all papers lodged in respect of any application under the said Act at their own expense.

8. The Master of the High Court of Chancery, or other Officer to whom it may be referred to tax the costs incurred in the matter of any petition presented under the said Act, shall allow or disallow in his discretion all payments made to
persons of science or skill examined as witnesses to matters of opinion chiefly.

_Council-office, Whitehall, Nov. 18, 1835._

---

_Subsequently the following Rules were added._

A party applying for an extension of a patent under section 4, of the said Act, must lodge at the Council-office four printed or written copies of his specification for the use of the Judicial Committee. If such specification shall have been printed in some publication, lodging four copies of the publication containing the same will be sufficient.

In the event also of the applicant's specification not having been published as aforesaid, and if the expense of making four copies of any drawing therein contained or referred to would be considerable, the lodging of one copy only of such drawing will be deemed sufficient.

All copies mentioned in this rule must be lodged not less than one week before the day fixed for hearing the application.

The Judicial Committee will hear the Attorney-General or other Counsel on behalf of the Crown against granting any application made under either the second or the fourth section of the said Act in case it shall be thought fit to oppose the same on such behalf.

_Council-office, Whitehall, Dec. 21, 1835._

---

_Rules of Practice laid down by Mr. Attorney and Mr. Solicitor-General respecting Disclaimers and Memorandums of Alteration._

Until further directions are given, the following is to be the mode of proceeding by a party in order to obtain leave to enter a disclaimer or alteration of any part, either of the
title of his invention or of the specification, pursuant to the Statute 5th and 6th Wm. IV., c. 83, s. 1.

1. The person applying must present a petition to the Attorney-General or Solicitor-General, stating what the proposed disclaimer or alteration is, when a time will be appointed for hearing the applicant. The petition is in general to be accompanied by a copy of the original specification, and of the proposed disclaimer or alteration.

2. If, on the hearing, the Attorney or Solicitor-General should think fit to disallow the proposed alteration or disclaimer no further proceeding is necessary; if he should think fit to allow it without any advertisement, then, on being applied to for the purpose, he will put his signature to the fiat, authorizing the Clerk of the Patents to make the required enrolment.

3. If it appears to the Attorney or Solicitor-General that any advertisement or advertisements ought to be inserted, then he will give such directions as he may think fit relative thereto, and will fix any time not sooner than ten days from the first publication of any such advertisement for resuming the consideration of the matter.

4. Caveats may be lodged at any time before the actual issuing of the fiat, and any party lodging a Caveat is to have seven days’ notice of the next meeting.

5. The fiat must be written or engrossed on the same parchment, with the disclaimer or alteration at the foot thereof.

---

Form of Petition to Her Majesty’s Attorney or Solicitor-
General for Fiat to enrol Disclaimer or Memorandum of Alteration.

The petition of A.B., of

in the County of (profession.)
APPENDIX.

Sheweth,

That your petitioner obtained Her Majesty's Royal letters patent, bearing date at Westminster, the day of
in the year of Her reign, for [here is inserted the title of the invention]: And whereas your petitioner duly enrolled a specification of his said invention.

[Here set forth some of the particulars sufficient to lead to the nature of the claims of invention, then set forth the disclaimer or alterations, and the reasons for the same.]

Your petitioner therefore prays leave of Her Majesty's Attorney [or Solicitor] General, certified by his seal and signature, as by the said Act provided, to enter with the Clerk of the Patents of England, the said disclaimer and memorandum of alteration, a copy of which signed by your petitioner is left herewith in the form in which your petitioner is desirous the same should be so entered as aforesaid.*

Form of Entry Paper to be left with Petition, and to be enrolled.

In the matter of a patent granted to A.B., of
in the County of , for his invention of [here set forth the title of the invention,] bearing date at Westminster the day of 1846.

DISCLAIMER AND MEMORANDUM OF ALTERATION proposed to be entered by A.B. with the Clerk of the Patents of England, pursuant to an Act passed in the 5th and 6th year of the reign of his late Majesty, King William IV,

* In the event of the petition being in behalf of an assignee of a patent, that circumstance must be stated, and the petition be in his name.

I, the said A.B. [here follows the words of the disclaimer and alterations, and the reasons for the same.] In witness whereof I, the said A.B., have hereunto set my hand and seal this day of , 1846.

(Signed) A.B.*

Form of Certificate of Fiat to be endorsed on Disclaimers.

TO THE CLERK OF THE PATENTS OF ENGLAND.

This is to certify, that A. B., of , in the County of , has applied to me for leave to enter with you the above-written disclaimer and memorandum of alteration [as the case may be] of a certain invention for which letters patent were duly granted to him, under the Great Seal, dated the day of , and the specification of which was enrolled on the day of

[And on considering of the said application, I directed him to advertise his said disclaimer and alterations in the "London Gazette," and in the ["Times" and "Morning Chronicle"] newspapers, and such advertisements having been duly made in the said "London Gazette," ["Morning Chronicle," and "Times"] newspapers, on the day

* The usual practice has been to have two copies of this document, one on parchment, and the other on paper, both of which are signed by Mr. Attorney or Mr. Solicitor-General. The one on paper has been deposited with the Clerk of the Patents, and the one on parchment has been usually acknowledged before a Master, or Master Extra, in Chancery and then enrolled, but it is suggested that it would be more correct to have the document which is enrolled, first marked by the Clerk of the Patents, and then enrolled; by such a course the indorsement would appear on the record showing that the document had been first filed by the Clerk of the Patents.
of, and no objection having been made to the said application, I have accordingly granted leave to the said A. B. to file his said disclaimer and alteration [as the case may be] pursuant to the Statute passed in the fifth and sixth year of the reign of His late Majesty, entitled, "An Act to amend the Law touching Letters Patent for Inventions." Dated this day of , 1846.

And having considered of the said application, and no objection having been made to the same, I have accordingly granted leave to the said A. B. to file his said disclaimer and alteration, pursuant to the Statute passed, &c. &c. Dated this day of , 1846.

Form of Certificate of Fiat to be endorsed on Entry Paper.

I have this day granted my fiat, giving leave to the above-named A. B. to file with you the above written disclaimer and memorandum of alteration [as the case may be].

Form of Caveat to be entered under the 1st section of the Act 5 & 6 W. IV. c. 83.

Caveat against any disclaimer or alteration in the patent of A. B., for "Certain improvements in spinning," dated the day of , without notice to C. D.

Form of Caveat to be entered under the 4th section of the Act 5 & 6 W. IV. c. 83.

Caveat against A. B. having any extension of his patent, dated the day of , for "Certain improvements in spinning," without notice to C. D.
Form of Assignment of Letters Patent.

This Indenture, made the day of , in the year of our Lord, 1846, between A. B., of , in the County of , of the one part, and C. D., of , in the County of , of the other part.

Whereas the said A. B. was the first and true inventor of [here insert title of invention], and the same had never been practised within England, Wales, and the town of Berwick-upon-Tweed, nor in Her Majesty's Colonies or Plantations abroad:* in consideration whereof, Her Most Gracious Majesty was pleased to grant unto him the said A. B., his executors, administrators, and assigns, Her Royal letters patent, bearing date at Westminster, the day of , in the year of her reign, giving and granting unto the said A. B., his executors, administrators, and assigns, full power, sole privilege and authority, that he, the said A. B., his executors, administrators, and assigns, and every of them, by himself and themselves, or by his or their deputy or deputies, servants or agents, or such others as he, the said A. B., his executors, administrators, or assigns, should at any time agree with, and no others, from time to time, and at all times thereafter, during the term of fourteen years thereby granted, should, and lawfully might make, use, exercise, and vend his said invention within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all Her said Majesty's Colonies and Plantations abroad,* in such manner as to him, the said A. B., his executors, administrators, and assigns, shall in his or their

* The words in italics are to be omitted when the patent does not extend to those places.
discretion seem meet; and that he, the said A. B., his executors, administrators, and assigns, shall, and lawfully may, have and enjoy the whole profit, benefit, and advantage, from time to time, coming, growing, accruing, and arising by reason of the said invention, for and during the said term of fourteen years. In which said letters patent there is contained a proviso, that if the said A. B. shall not, within the space of * calendar months, enrol a full and particular description of the nature of the said invention, and in what manner the same is to be performed, by an instrument in writing under his hand and seal, that then the said letters patent and all liberties and advantages whatsoever thereby granted should utterly cease, determine, and become void. And whereas the said A. B., in pursuance of the said proviso, did particularly describe and ascertain the nature of his said invention, and in what manner the same was to be performed by an instrument in writing under his hand and seal, and did cause the same to be duly enrolled according to the said proviso.

Now this indenture witnesseth, that in consideration of the sum of £ of lawful money of Great Britain, in hand well and truly received by the said A. B., from the said C. D., at or before the signing and sealing of these presents, the receipt whereof the said A. B. doth hereby acknowledge, and of and from the same and every part thereof, doth acquit, release, and for ever absolutely discharge the said C. D., his executors, administrators, and assigns: he, the said A. B., hath bargained, sold, transferred, and set over unto the said C. D., his executors, administrators, and assigns, all those the said letters patent hereinbefore mentioned, and all benefit, profit, and advan-

* The number of months set forth in the letters patent are to be here inserted.
tage whatsoever thereof and therefrom, and all right, title, property, claim, and demand whatsoever, both at law and in equity, of him the said A. B., his executors, administrators, and assigns, in or to the letters patent hereby assigned, or expressed and intended so to be assigned.

To have and to hold the said letters patent, and all and singular other the premises hereby assigned, or intended so to be, unto the said C. D., his executors, administrators, and assigns, for his and their absolute benefit, in as ample and beneficial a manner, to all intents and purposes, as the said A. B. might or could have held or enjoyed the same if these presents had not been made.

And further, the said A. B. doth, for himself, his executors, and administrators, promise, covenant, and agree to and with the said C. D., his executors, administrators, and assigns, by these presents, in manner following; (that is to say), that he, the said A. B., now hath in himself good right and full power and authority to assign the said letters patent and premises hereby assigned, or intended so to be, unto the said C. D., his executors, administrators, and assigns, in manner aforesaid, and according to the true intent and meaning of these presents, and that the said letters patent and premises shall and may be lawfully held and enjoyed accordingly, and that free and clear, and freely and clearly acquitted, exonerated, and discharged, or otherwise, by the said A. B., his heirs, executors, or administrators, being at all times well and sufficiently saved, defended, and kept harmless and indemnified from and against all charges and incumbrances whatsoever made, done, or willingly suffered by him, the said A. B., his heirs, executors, and administrators.

And moreover, the said A. B., his heirs, executors, and administrators, lawfully claiming, or to claim, through or under him, them, or any of them, shall and will, from time
to time, and at all times hereafter, upon the request, and at the cost and charges, of the said C. D., his executors, administrators, and assigns, make, do, and execute all such lawful acts, deeds, and things in law whatsoever, for more effectually assigning and assuring the said premises in manner aforesaid, and according to the true intent and meaning of these presents, as by the said C. D., his executors, administrators, or assigns, or his or their Counsel in the law, shall or may be advised and required.

In witness, &c.

A. B. (seal).

Received the day and year first above written, of and from the above-named C. D., the sum of £, being the consideration money above mentioned.

Witness G. II.

At the back of the deed is written:—

Sealed, signed, and delivered (being first duly stamped) by the within-named A. B., in presence of

E. F.

Form of Licence to use Invention.

This Indenture, made the day of , in the year of our Lord, one thousand eight hundred and forty-six; between A. B., of the one part, and C. D., of the other part.

Whereas the said A. B. was the first and true inventor of [here insert title of invention], and the same had never been practised within England, Wales, and the town of
Berwick-upon-Tweed, nor in Her Majesty's Colonies or Plantations abroad,* in consideration whereof, Her Most Gracious Majesty was pleased to grant unto him, the said A. B., his executors, administrators, and assigns, her Royal letters patent, bearing date at Westminster, the day of , in the year of her reign, giving and granting unto the said A. B., his executors, administrators, and assigns, full power, sole privilege and authority, that he, the said A. B., his executors, administrators, and assigns, and every of them, by himself and themselves, or by his or their deputy or deputies, servants or agents, or such others as he, the said A. B., his executors, administrators, or assigns, should at any time agree with, and no others, from time to time, and at all times thereafter, during the term of fourteen years thereby granted, should, and lawfully might, make, use, exercise, and vend his said invention within England, Wales, and the town of Berwick-upon-Tweed, and in the Islands of Guernsey, Jersey, Alderney, Sark, and Man, and also in all her said Majesty's Colonies and Plantations abroad,* in such manner as to him, the said A. B., his executors, administrators, and assigns, shall in his or their discretion seem meet; and that he, the said A. B., his executors, administrators, and assigns, shall, and lawfully may, have and enjoy the whole profit, benefit, and advantage, from time to time coming, growing, accruing, and arising by reason of the said invention, for and during the said term of fourteen years. In which said letters patent there is contained a proviso, that if the said A. B. shall not, within the space of† calendar months, enrol a full and particular description of the nature of the said invention, and

* The words in italics are to be left out when the patent does not extend to those places.
† The number of months set forth in the letters patent are to be here inserted.
in what manner the same is to be performed by an instrument in writing under his hand and seal, that then the said letters patent and all liberties and advantages whatsoever thereby granted should utterly cease, determine, and become void. And whereas the said A. B., in pursuance of the said proviso, did particularly describe and ascertain the nature of his said invention, and in what manner the same was to be performed by an instrument in writing under his hand and seal, and did cause the same to be duly enrolled according to the said proviso.

And whereas the said A. B. hath agreed to grant a licence to the said C. D., his executors, administrators, and assigns, to use the said invention to the extent of [two machines,] made and constructed according to the specification of the said letters patent.

Now, this indenture witnesseth, that in pursuance of the said agreement, and in consideration of the sum of pounds by the said C. D. to the said A. B., well and truly paid, the receipt whereof is hereby acknowledged, the said A. B., for himself, his executors, administrators, and assigns, hath granted, and by these presents doth grant to the said C. D., his executors and administrators, full power, licence, and authority to erect, have, and use [two machines,*] made and constructed according to the invention aforesaid, for and during, and unto the full end and term of the letters patent aforesaid; subject, nevertheless, to the conditions and provisos hereinafter mentioned. And in consideration of the aforesaid privilege or licence, the said C. D., for himself, his executors and administrators, doth promise and agree to erect [two such machines] in the factory, situate , and that in case, at any time hereafter, he or they, the said

* In some instances the size or capacity of the machine should be fully stated, depending on the peculiar character of the invention.
C. D., his executors and administrators, may find it desirable to move such machines as aforesaid, to any other factory in his or their occupation, that then the said C. D., his executors or administrators, shall and will give notice, in writing, to that effect, to the said A. B., his executors, administrators, or assigns, and that he, the said A. B., his executors, administrators, and assigns, shall and may, twice in every year, at seasonable times in the day, enter such manufactory, containing the aforesaid machines. And that the said C. D., his executors and administrators, shall not, nor will at any time or times hereafter, during the continuance of the aforesaid letters patent, set up or erect, or permit to be set up or erected, in any factory in his or their occupation, any other machines similar to those described in the specification of the said letters patent, nor any part or parts thereof which are claimed and form part of the said invention, without the licence and consent, in writing, of the said A. B., his executors, administrators, and assigns, first had and obtained in that behalf. And that the said C. D., his executors and administrators, shall not, nor will at any time hereafter, during the said term of fourteen years, either directly or indirectly, do, or cause to be done, any act, matter, or thing which would injure, or tend to injure, the validity of the said letters patent, or privileges thereby granted, but will at all times give every information that the said A. B., his executors, administrators, and assigns, may support, uphold, and retain the rights and privileges so granted as aforesaid.

And lastly, for the true and faithful performance of every covenant, article, matter, and thing herein contained, the said C. D., for himself, his heirs, executors, and administrators, doth bind each and every of them unto the said A. B., his executors, administrators, and assigns, in the
APPENDIX.

penal sum of
Britain.
In witness, &c.

Received, the day and year within
written, the sum of pounds,
being the consideration-money
within mentioned.
Witness

* If the patent include the Colonies or the Islands, the cost will be increased by 7l. 7s. 6d.; and if there be two or more persons in the patent the fees are further increased.

† In the event of the patent being opposed there will be additional charges.

‡ If there be private seals and extra dispatch or journeys, these fees will be increased in amount, depending on the circumstances.

** The cost of the specification to each patent depends on its length, also on the difficulties of drawing that document, and the drawings necessary.
